Development and Evaluation of High Temperature Protective Coatings for Columbium Alloys. Part II. Coating Evaluation Feb 04 2021 A comparative evaluation was made of 18 coating-base metal systems, six different coatings applied to 3 Nb base materials (D-31 alloy, F-48 alloy and unalloyed Nb). The 18 coating-base metal systems were tested under the same conditions in cyclic oxidation (2300 and 2500 F), thermal shock (200 to 250 F), bend-oxidation (2500 F) and stress-oxidation (2500 F) plus tensile tests. The tests produced directly comparable data between the coating-base metal systems relating to the protective nature of each coating and the effect of the coating and the coating treatment on the mechanical properties of the substrate. (Author).

BASF Handbook Basics of Coating Technology Aug 10 2021 The industry's most comprehensive handbook - now available in its 3rd edition: the BASF Handbook covers the entire spectrum from coatings formulation and relevant production processes through to practical application aspects. It takes a journey through the industry's various sectors, placing special emphasis on automotive coating and industrial coating in general. The new edition has been completely updated, featuring several new

sections on nanoproducts, low-emissions, biobased materials, wind turbine coating, and smart coatings.

Microbicides in Coatings Mar 05 2021 All about biocides for coatings: When it comes to protecting coatings, it is essential to strike the right balance between controlling germs in order to avoid economic damage on the one hand and tolerating microbial life where it is necessary and useful on the other. The new book from Frank Sauer provides a comprehensive overview of the working mechanisms and possible applications of microbicides for coatings - invaluable for formulators and technicians as well as for business people with a basic knowledge of chemistry and biology.
