This book brings together

international research and practical perspectives on the current state of teenagers' reading. Contributions by teachers, researchers and other educators explore the 'what, how, when, where, and why' of adolescents' reading, advancing our grasp of the relationships between and among teenage readers, texts and contexts. Report of the House Permanent Select Committee on Intelligence, Pursuant to H. Res. 660 in Consultation with the House Committee on Oversight and Reform and the House Committee on Foreign Affairs. This report reflects the evidence gathered thus far by the House Permanent Select Committee on Intelligence, in coordination with the Committee on Oversight and Reform and the Committee on Foreign Affairs, as part of the House of Representatives' impeachment inquiry into Donald J. Trump, the 45th President of the United States. Originally published in 1984, *Reading the Romance* challenges popular (and often

demeaning) myths about why romantic fiction, one of publishing's most lucrative categories, captivates millions of women readers. Among those who have disparaged romance reading are feminists, literary critics, and theorists of mass culture. They claim that romances enforce the woman reader's dependence on men and acceptance of the repressive ideology purveyed by popular culture. Radway questions such claims, arguing that critical attention "must shift from the text itself, taken in isolation, to the complex social event of reading." She examines that event, from the complicated business of publishing and distribution to the individual reader's engagement with the text. Radway's provocative approach combines reader-response criticism with anthropology and feminist psychology. Asking readers themselves to explore their reading motives, habits, and rewards, she conducted interviews in a midwestern town with forty-two romance readers whom

she met through Dorothy Evans, a chain bookstore employee who has earned a reputation as an expert on romantic fiction. Evans defends her customers' choice of entertainment; reading romances, she tells Radway, is no more harmful than watching sports on television. "We read books so we won't cry" is the poignant explanation one woman offers for her reading habit. Indeed, Radway found that while the women she studied devote themselves to nurturing their families, these wives and mothers receive insufficient devotion or nurturance in return. In romances the women find not only escape from the demanding and often tiresome routines of their lives but also a hero who supplies the tenderness and admiring attention that they have learned not to expect. The heroines admired by Radway's group defy the expected stereotypes; they are strong, independent, and intelligent. That such characters often find themselves to be victims of

male aggression and almost always resign themselves to accepting conventional roles in life has less to do, Radway argues, with the women readers' fantasies and choices than with their need to deal with a fear of masculine dominance. These romance readers resent not only the limited choices in their own lives but the patronizing attitude that men especially express toward their reading tastes. In fact, women read romances both to protest and to escape temporarily the narrowly defined role prescribed for them by a patriarchal culture. Paradoxically, the books that they read make conventional roles for women seem desirable. It is this complex relationship between culture, text, and woman reader that Radway urges feminists to address. Romance readers, she argues, should be encouraged to deliver their protests in the arena of actual social relations rather than to act them out in the solitude of the imagination. In a new introduction, Janice

Radway places the book within the context of current scholarship and offers both an explanation and critique of the study's limitations. This book constitutes the refereed conference proceedings of the 15th IFIP WG 6.11 Conference on e-Business, e-Services and e-Society, I3E 2016, held in Swansea, UK, in September 2016. The 47 full and 17 short papers presented were carefully reviewed and selected from 90 submissions. They are organized in the following topical sections: social media strategy and digital business; digital marketing and customer relationship management; adoption and diffusion; information sharing on social media; impression, trust, and risk management; data acquisition, management and analytics; e-government and civic engagement; e-society and online communities. The Mariner's Handbook for Australian Waters (AHP20) is an official nautical publication providing mariners with important regulatory, procedural and environmental

information affecting the planning and conduct of a voyage to or from Australian ports, or within Australian waters. It includes a summary of all relevant information from various Australian government agencies under the cover of one combined reference, with links to further information if required. Airpower, especially strategic bombing,

frequently generates controversy. Ever since the US Army bought it first "aeroplane" in 1909, debates have raged over the utility, effectiveness, efficiency, legality, and even the morality of air power. These debates continue despite (or perhaps because of) the hundreds of books that have been written on the subject and the scores of examples witnessed. Much of the debate regarding airpower and strategic bombing has been colored by accusations, misconceptions, inaccuracies, myths, and simple untruths. If airpower needs criticizing it must be based on accurate information. This manuscript highlights points and counterpoints that attempt to clear away some of the detritus that obscures the subject, thus allowing more informed debate on the real issues concerning air power and strategic bombing. With the widespread availability of satellite and aircraft remote sensing image data in digital form, and the ready access most remote sensing

practitioners have to computing systems for image interpretation, there is a need to draw together the range of digital image processing procedures and methodologies commonly used in this field into a single treatment. It is the intention of this book to provide such a function, at a level meaningful to the non-specialist digital image analyst, but in sufficient detail that algorithm limitations, alternative procedures and current trends can be appreciated. Often the applications specialist in remote sensing wishing to make use of digital processing procedures has had to depend upon either the mathematically detailed treatments of image processing found in the

electrical engineering and computer science literature, or the sometimes necessarily superficial treatments given in general texts on remote sensing. This book seeks to redress that situation. Both image enhancement and classification techniques are covered making the material relevant in those applications in which photointerpretation is used for information extraction and in those wherein information is obtained by classification.
