The wildland fire community has spent the past decade trying to understand and account for the role of human factors in wildland fire organizations. Social research that is relevant to managing fire organizations can be found in disciplines such as social psychology, management, and communication. However, such research has been published primarily for scientific and business audiences, and much of the fire community has not been exposed to it. Here, we have compiled and organized knowledge from a variety of social science disciplines so that it can be used to improve organizational practices related to firefighter and public safety, to assess the effectiveness of safety campaigns, and to improve firefighter safety trainings. This annotated reading list summarizes approximately 270 books, articles, and online resources that address scientific and management concepts helpful for understanding the human side of fire management. The first section, Human Factors and Firefighting, introduces readers to key workshops and writings that led to the recognition that human factors are prime ingredients of firefighter safety. The second section, Foundations for Understanding Organizations, consists of social science research that provides a foundation for understanding organizational dynamics. This section includes readings on decision making and sensemaking, organizational culture, identification and identity, leadership and change, organizational learning, and teams and crews. The third section, Understanding Organizations in High Risk Contexts, explores organizations that deal regularly with risk, uncertainty and crisis. This section includes readings on risk and uncertainty, high reliability organizing, and crisis communication. The publication concludes with Internet resources available for those interested in the management of fire organizations. The history of a Sudanese labour movement. Fiction and Social Research brings together writers from a variety of disciplines to explore and illustrate the possibilities of new narrative forms in social research. At the intersections of fiction, ethnography, and cultural studies, these essays demonstrate narratives that simultaneously enrich fieldwork and enliven research reporting. By arranging this volume into four areas of concern, this volume demonstrates how fiction can express issues of representation, subjectivity, critique and postmodern discourse. This volume is unique in its accessibility and will prove a valuable tool to the veteran scholar and beginning ethnographer alike. This state-of-knowledge review about the effects of fire on air quality can assist land, fire, and air resource managers with fire and smoke planning, and their efforts to explain to others the science behind fire-related program policies and practices to improve air quality. Chapter topics include air quality regulations and fire; characterization of emissions from fire; the transport, dispersion, and modeling of fire emissions; atmospheric and plume chemistry; air quality impacts of fire; social consequences of air quality impacts; and recommendations for future research. This timely revision will feature the latest Internet issues and provide an updated comprehensive look at social and ethical issues in computing from a computer science perspective. Social Policy Review is an annual selection of commissioned chapters focusing on developments and debates in social policy in the UK, Europe and internationally. The Review has become recognised as a topical, accessible, well-written and affordable publication and has a substantial readership among social policy academics, students, researchers and policy makers. Fire events often have a large impact on recreation and tourism, yet these issues had not been addressed from a social science perspective. There are three distinct lines of research to address: examine values/attitudes and behaviors of recreation residence owners and year-round residents in the wildland-urban interface; examine recreationists' perceptions about fire suppression and postfire forest health issues; and examine perceptions and beliefs about recreation activities and impacts to fire-prone ecosystems in the wildland-urban interface. This report includes 17 of these studies grouped into four major topical headings: recreation use research, commun. research, program eval. and interface residents research, and trust research. Charts and tables. A U.S. Department of Agriculture Forest Service (USFS) call for research proposals in 2001 addressed rebuilding USFS capability to address problems in fire-adapted ecosystems and in the wildland-urban interface. This effort supported the National Fire Plan and the 10-year comprehensive fire strategy. The National Fire Plan goals were to ensure sufficient firefighting resources for the future, rehabilitate and restore fire-damaged ecosystems, reduce fuels (combustible forest materials) in forests and rangelands at risk, especially near communities, and work with local residents to reduce fire risk and improve fire protection. Each proposal included the proposed research, development, and implementation activities that would be undertaken over a 5-year period, as well as the expected outcomes from these activities. The major topic headings for proposals were firefighting, rehabilitation and recovery, hazardous fuel reduction, and community assistance. Funding was distributed according to a formula developed by national team leaders within the USFS with firefighting receiving 34 percent of the funds, rehabilitation and recovery 20 percent, hazardous fuel reduction 35 percent, community assistance 10 percent, and Washington office administration 1 percent. This allocation reflected the judgment of national team leaders about the relative magnitude of needs and the alignment of the program with the National Fire Plan goals and objectives. It took into account the serious need for pivotal core fire science development and the eligibility of the social sciences across all four topics. The Wildland Recreation and Urban Cultures Research Work Unit of the Pacific Southwest Research Station was funded through this allocation within the community assistance topic area. In the proposal, we noted that fire events often have a large impact on recreation and tourism, yet these issues had not been addressed from a social science perspective. These impacts are due to the direct short- and long-term biophysical effects of fires, and indirect or induced effects owing to firefighting operations, fuel treatments, area closures, and other disruptions to social systems. Local populations are affected, as are visiting populations, and these effects are particularly acute in wildlands near urban areas. Understanding and managing these impacts would be improved by scientific study of the values, attitudes, beliefs, and behaviors of the affected populations in relation to fire events, fire management, and fire effects. Unit work focused on three research objectives: Examine values/attitudes and behaviors of recreation residence owners and year-round residents in the wildland-urban interface; Examine recreationists'

perceptions about fire suppression and postfire forest health issues; and Examine perceptions and beliefs about recreation activities and impacts to fire-prone ecosystems in the wildland-urban interface. In the first year of funding, we developed research and cooperative relationships with people in California, Colorado, Florida, Michigan, and Washington. Our work over the years has increased considerably, and the unit has conducted research studies in many locations across the United States. We report 17 of these studies grouped into four major topical headings: recreation use, communication, program evaluation and interface residents, and trust. Gift of Fire is ideal for courses in Computer Ethics and Computers and Society. In this revision of a best-seller, Baase explores the social, legal, philosophical, ethical, political, constitutional, and economic implications of computing and the controversies they raise. With a computer scientist's perspective, and with historical context for many issues, she covers the issues readers will face both as members of a technological society and as professionals in computer-related fields. A primary goal is to develop computer professionals who understand the implications of what they create and how it fits into society at large. Although public safety agencies protect our well-being, they also shape social problems and community inequities. Public safety protections promote what T.H. Marshall called "social rights" of equitable citizenship. Frontlines of Welfare State shows how public safety agencies function as welfare state agencies, responsible for a range of essential public functions including emergency service, criminal investigation, regulatory oversight and social service outreach. Furthermore, this volume shows how public safety agencies are being asked to absorb more social welfare functions amidst cut-backs in other areas of the welfare state. Two areas of public safety are examined: arson control and fire prevention, especially within the contexts of urban change and gentrification, and community policing, especially as a mechanism of expanding drug treatment service and prevention programs. Facilitating a greater understanding of institutional biases within the state built around organizational structures, procedures and cultures and their impact on social outcomes, this original and exciting book will be of interest to researchers, practitioners and undergraduate and postgraduate students in the fields of Policing and Fire Control, Public Policy and Administration, Drugs and Substance Abuse and White Collar Crime. "A classic. I can't recommend it enough."--Chris Hayes On Thursday, July 13, 1995, Chicagoans awoke to a blistering day in which the temperature would reach 106 degrees. The heat index, which measures how the temperature actually feels on the body, would hit 126 degrees by the time the day was over. Meteorologists had been warning residents about a two-day heat wave, but these temperatures did not end that soon. When the heat wave broke a week later, city streets had buckled; the records for electrical use were shattered; and power grids had failed, leaving residents without electricity for up to two days. And by July 20, over seven hundred people had perished—more than twice the number that died in the Chicago Fire of 1871, twenty times the number of those struck by Hurricane Andrew in 1992—in the great Chicago heat wave, one of the deadliest in American history. Heat waves in the United States kill more people during a typical year than all other natural disasters combined. Until now, no one could explain either the overwhelming number or the heartbreaking manner of the deaths resulting from the 1995 Chicago heat wave. Meteorologists and medical scientists have been unable to account for the scale of the trauma, and political officials have puzzled over the sources of the city's vulnerability. In Heat Wave, Eric Klinenberg takes us inside the anatomy of the metropolis to conduct what he calls a "social autopsy," examining the social, political, and institutional organs of the city that made this urban disaster so much worse than it ought to have been. Starting with the question of why so many people died at home alone, Klinenberg investigates why some neighborhoods experienced greater mortality than others, how the city government responded to the crisis, and how journalists, scientists, and public officials reported on and explained these events. Through a combination of years of fieldwork, extensive interviews, and archival research, Klinenberg uncovers how a number of surprising and unsettling forms of social breakdown—including the literal and social isolation of seniors, the institutional abandonment of poor neighborhoods, and the retrenchment of public assistance programs—contributed to the high fatality rates. The human catastrophe, he argues, cannot simply be blamed on the failures of any particular individuals or organizations. For when hundreds of people die behind locked doors and sealed windows, out of contact with friends, family, community groups, and public agencies, everyone is implicated in their demise. As Klinenberg demonstrates in this incisive and gripping account of the contemporary urban condition, the widening cracks in the social foundations of American cities that the 1995 Chicago heat wave made visible have by no means subsided as the temperatures returned to normal. The forces that affected Chicago so disastrously remain in play in America's cities, and we ignore them at our peril. For the Second Edition Klinenberg has added a new Preface showing how climate change has made extreme weather events in urban centers a major challenge for cities and nations across our planet, one that will require commitment to climate-proofing changes to infrastructure rather than just relief responses. This book skilfully lays out how, apart from their misguided approach to knowledge production and specializations, social sciences continue to remain prisoners of a prescribed historical, cultural and anthropogenic narrative. The Ultimate 6x9 120 Pages Journal For: People Who Are In This Profession or Hobby People Who Love to Laugh and Journal New social movements have emerged in Bolivia over the "price of fire" - access to basic elements of survival like water, gas, land, coca, employment, and other resources. Though these movements helped pave the way to the presidency for indigenous coca-grower Evo Morales in 2005, they have made it clear that their fight for self-determination doesn't end at the ballot box. From the first moments of Spanish colonization to today's headlines, The Price of Fire offers a gripping account of clashes in Bolivia between corporate and people's power, contextualizing them regionally, culturally, and historically. Years of drought and decades of aggressive fire exclusion have left North American forests at high risk for future catastrophic fires. Forest settings are a magnet for recreational opportunities and for rapidly growing residential development putting an increasing number of citizens and their property into the path of wildfires. Recordsetting wildfires initiated the twentyfirst century and motivated the rise to prominence of wildfire on the political agenda, prompting important and farreaching new public policy initiatives. To be effective, these policies must be informed by sciencebut that requires more than just improved knowledge about the physical and biological dynamics of fire and forest ecosystems. Social values, socioeconomic factors, demographic trends, institutional arrangements, and human behavior must also be taken into consideration by the agencies and individuals responsible for wildland fire decision making. The first book to integrate the social science literature on the human dimensions of wildfire, People, Fire, and Forests reviews current studies from this broad, interdisciplinary field and synthesizes them into a rich body of knowledge with practical management implications. Chapters in the book highlight principal findings and common threads in the existing research and identify strengths and gaps. They cover such topics as public perception of wildfire risk, acceptability of fire management policies, and community impacts of wildfire. Designed to make relevant social science information more available and useful to wildfire risk managers and policy makers, People, Fire, and Forests is also intended to encourage and guide further research into wildfire. By exploringthe theoretical and methodological issues surrounding human interactions with wildfire and describing the practical implications of this research, this volume provides an essential resource for students, scholars, and professionals. A cross genre-collection illustrating the concepts of breaking silence, bearing witness, and celebrating resistance. From publisher description. Fire and Ink is a powerful and impassioned anthology of stories, poems, interviews, and essays that confront some of the most pressing social issues of our day. Designed to inspire and inform, this collection embodies the concepts of Òbreaking silence, Ò Òbearing witness, Ò resistance, and resilience. Beyond students and teachers, the book will appeal to all readers with a commitment to social justice. Fire and Ink brings together, for the first time in one volume, politically engaged writing by poets, fiction writers, and essayists. Including many of our finest writersÑMart'n Espada, Adrienne Rich, June Jordan, Patricia Smith, Gloria Anzaldœa, Sharon Olds, Arundhati Roy, Sonia Sanchez, Carolyn Forche, Chitra Banerjee Divakaruni, Alice Walker, Linda Hogan, Gary Soto, Kim Blaeser, Minnie Bruce Pratt, Li-Young Lee, and Jimmy Santiago Baca, among othersÑthis is an indispensable collection. This groundbreaking anthology marks the emergence of social action writing as a distinct field within creative writing and literature. Featuring never-before-published pieces, as well as reprinted material, Fire and Ink is divided into ten sections focused on significant social issues, including identity, sexuality and gender, the environment, social justice, work, war, and peace. The pieces can often be gripping, such as ÒFrame, Ò in which Adrienne Rich confronts government

and police brutality, or Chris Abani's *Ode to Joy*, which documents great courage in the face of mortal danger. *Fire and Ink* serves as a wonderful reader for a wide range of courses, from composition and rhetoric classes to courses in ethnic studies, gender studies, American studies, and even political science, by facing a past that was often accompanied by injustice and suffering. But beyond that, this collection teaches us that we all have the power to create a more equitable and just future. More than 150 key social issues confronting the United States today are covered in this eight-volume set: from abortion and adoption to capital punishment and corporate crime; from obesity and organized crime to sweatshops and xenophobia.
