**Psychology from an Empirical Standpoint** Jul 21 2022 Franz Brentano's classic study Psychology from an Empirical Standpoint was the most important of Brentano's works to be published in his lifetime. A new introduction by Peter Simons places Brentano's work in the context of current philosophical thought. He is able to show how Brentano has emerged since the 1970s as a key figure in both contemporary European and Anglo-American traditions and crucial to any understanding the recent history of philosophy and psychology.

**Clinical Psychiatry** Jun 20 2022 Excerpt from Clinical Psychiatry: A Text-Book for Students and Physicians, Abstracted and Adapted From the Seventh German; Edition of Kraepelin's German Edition of Kraepelin's "Lehrbuch Der Psychiatrie" The motive for this work was to make the teachings of Kraepelin in psychiatry accessible to American medical students and general practitioners, and, at the same time, to provide a full, but concise, text-book, not only for the writer's own classes in psychiatry in the Medical Department of Yale University, but as well for other American teachers who follow Kraepelin's views. Urged by the rapidly increasing interest in Professor Kraepelin's teaching during the past five years in this country and the constantly growing number of his disciples, it was the writer's first intention to publish a complete translation of the sixth edition of Kraepelin's "Lehrbuch der Psychiatrie." It was feared, however, that a full translation would be too large to best subserve the function of a text-book, and would have rendered impossible the adaptation of the Kraepelin psychiatry to our peculiar American needs. The classification, terminology, and, wherever possible, the phraseology of this work are Kraepelinian, but the writer has taken the liberty of abbreviating disproportionately the description of some psychoses which are of less importance to the American physician, especially the constitutional psychopathic states and thyroigenous insanity, and of laying more stress upon other more important forms, the description of acquired neurasthenia, traumatic neuroses, also the treatment in epileptic and hysterical insanity and acquired neurasthenia. **Cognitive Psychology** Dec 22 2019 First published in 1967, this seminal volume by Ulric Neisser was the first attempt at a comprehensive and accessible survey of Cognitive Psychology; as such, it provided the field with its first true textbook. Its chapters are organized so that they began with stimulus information that came 'inward' through the organs of sense, through its many transformations and reconstructions, and finally through to its eventual use in thought and memory. The volume inspired numerous students enter the field of cognitive psychology and some of the today's leading and most respected cognitive psychologists cite Neisser's book as the reason they embarked on their careers.

**Experimental Psychology** May 19 2022 Originally published in German in 1923, this English edition was first published in 1931. From the translators preface: "Experimentelle Psychologie is characterized by an excellent summarizing of the most recent experimental data and by a spirit of fairness which it exhibits in organizing facts under general theoretical principles. Besides informing the reader, it stimulates him by critical remarks and suggestions for further thinking and experimentation."

**Martin Buber on Psychology and Psychotherapy** Jan 23 2020 "Buber came to play a role in the development of so-called third force psychology. . . . In the exchange between Buber and [Carl] Rogers, one can see how far they both were from the world of Freud, which presumes an omniscient analyst dealing with curiously foolish neurotics. Freud's aloofness might have been self deception, but he never advocated anything like the mutual give-and-take that Buber and Rogers had in mind. . . . Buber's mind was in another world from that of early psychoanalysis, and the passage of time has shown how relevant his thinking can be to how we approach the healing professions."—from

**Lectures on Human and Animal Psychology (Psychology Revivals)** Nov 01 2020 Wilhelm Wundt is known today as one of the founding figures of modern psychology. The first person to ever call himself a Psychologist, he is also widely regarded as the "father of experimental psychology", having established the first laboratory in the world dedicated to psychological research. This paved the way for psychology as an independent field of study. A prolific writer, this title contains 30 lectures on human and animal psychology given in the latter half of the nineteenth century. This edition was originally published in 1912, a translation of the second German edition, the earlier edition being the first of the author's works to be translated into English.

*Dictionary of Psychology and Psychiatry* Dec 02 2020 Widely used for many years by both scientists and other specialists, as well as translators, the two-volume English-German / German-English Dictionary of Psychology and Psychiatry is generally regarded as the most exhaustive bilingual compilation of terminology in these fields available. In this brand new edition, the Dictionary of Psychology and Psychiatry has not only been fully revised and updated, but also considerably expanded. For instance, all the terms and vocabulary from the field of psychiatry have been carefully reviewed and brought up to date by inclusion of the terminology used in DSM-IV and ICD-10, as well as numerous other entries from this evolving area. The increasing standardization of scientific terminology in psychiatry has thus been taken account of in the new edition. Also included are explanations and translations of more than 1,000 of the most common abbreviations used in the fields of psychology and psychiatry.

*Cultural Diversity and the Empowerment of Minorities* Sep 30 2020 Conflicts between different racial, ethnic, national and other social groups are becoming more and more salient. One of the main sources of these internal conflicts is social and economic inequality, in particular the increasing disparities between majority and minority groups. Even societies that had been successful in dealing with external conflicts and making the transition from war to peace have realized that this does not automatically resolve internal conflicts. On the contrary, the resolution of external conflicts may even sharpen the internal ones. This volume, a joint publication of the University of Haifa and the International Center for Graduate Studies (ICGS) at the University of Hamburg, addresses questions of how to deal with internal issues of social inequality and cultural diversity and, at the same time, how to build a shared civility among their different national, ethnic, religious and social groups.

Motivation and Action Aug 22 2022 The translation of this volume has been a long and sometime arduous journey giving nearly literal meaning to the Latin term *translatum*, meaning to carry across. In fact, it required many journeys both geographically, between Canada and Germany, and figuratively, between German and English language, thought, and culture; between the mind of a German professor and that of his American colleague. Whether or not it was all worthwhile must be left to the reader's judgment, but let me outline the rationale for embarking on this venture. When the first German edition of this book appeared in 1980 it was acclaimed not only by German scholars but by those outside the German-speaking community as well. In fact, it received extremely favorable reviews, even in English-language journals, which is unusual for a foreign text. It was recognized that this was far more than just another text book on motivation. For one thing, it exposed and examined the multi faceted roots that have contributed to contemporary theory and research in motivation. The author skillfully examined the motivational concepts, theories, and research that have emanated from many areas of psychology such as learning theory, social psychology, personality, psychoanalysis, and clinical psychology.

*COVID-19 and Psychology* Jan 03 2021 Already, the COVID-19 pandemic has left a deep mark on all levels of human activity and sentiment. As far as the best possible management of the situation is concerned, it is not only up

to governments and experts in health systems, but ultimately up to each individual to act appropriately. Understanding the psychological background and the societal context is essential. This essential is also intended to make a contribution in the sense of joint and successful coping. This Springer essential is a translation of the original German 1st edition COVID-19 und Psychologie by John G. Haas, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically different from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

*German Psychology of To-day* Dec 26 2022

*Motivation and Action* Jul 09 2021 This third edition provides translations of all chapters of the most recent fifth German edition of *Motivation and Action*, including several entirely new chapters. It provides comprehensive coverage of the history of motivation, and introduces up-to-date theories and new research findings. Early sections provide a broad introduction to, and deep understanding of, the field of motivation psychology, mapping out different perspectives and research traditions. Subsequent chapters examine major themes of human motivation, including achievement, affiliation, and power motivation as well as the fundamentals of motivation psychology, such as motivated and goal oriented behaviors, implicit and explicit motives, and the regulation of development. In addition, the book discusses the roles of motivation in three practical fields: school and college, the workplace, and sports. Topics featured in this text include: Social Relationships and its effects on sexual or intimacy motivation. Conscious and unconscious motivators of behavior. Drives and incentives in the fields of achievement, intimacy, sociability and power. How the biochemistry and structures of our brain shapes motivated behavior. How to engage in intentional goal-directed behavior. The potential and limits of motivation and self-direction in shaping our lives. *Motivation and Action, Third Edition*, is a must-have resource for undergraduate and graduate students as well as researchers in the fields of motivation psychology, cognitive psychology, and social psychology, as well as personality psychology and agency. About the Editor: Jutta Heckhausen is the daughter of Heinz Heckhausen, who published "Motivation and Action" as a monograph in 1980 and who died in 1988 just before the 2nd edition came out. Dr. Heckhausen received her Ph.D. in 1985 from the University of Strathclyde, Glasgow with a dissertation about early mother-child interaction, and did her Habilitation in 1996 at the Free University of Berlin with a monograph about developmental regulation in adulthood. Dr. Heckhausen worked for many years at the Max Planck Institute for Human Development in Berlin, conducting research about the role of motivation in lifespan development. She is currently a professor of psychology at the University of California, Irvine.

**Woerterbuch der Psychologie und Psychiatrie / Dictionary of Psychology and Psychiatry** Jan 27 2023 Widely used by scientists, practitioners, students and translators, this two-volume English-German/German English 'Dictionary of Psychology and Psychiatry' is generally regarded as the most exhaustive bilingual compilation of terminology in these fields.

*Motivational Psychology of Human Development* Mar 05 2021 The idea for this book grew out of the conference "Motivational Psychology of Ontogenesis" held at the Max Planck Institute for Human Development in Berlin, Germany, in May 1998. This conference focused on the interface of development and motivation and therefore brought together scholars from three major areas in psychology - developmental, motivational and lifespan. This combination of fields represents the potential influence of development on motivation and the potential role motivation plays in development and its major contexts of family, work and school. Thus, contributors were chosen to apply motivational models to diverse settings of human everyday life and in various age groups across the life span, ranging from early childhood to old age.

**German Psychology of 'to-Day** Jul 29 2020 Excerpt from *German Psychology of 'to-Day: The Empirical School* American and English students will be grateful to have M. Ribot's valuable work in their own tongue by a competent translator. It contains the combined result of careful observations, experiments, and calculations which can not be obtained otherwise, except by reading innumerable books and monographs most difficult to collect. His interpretations and criticisms also are original and profound. If we would properly estimate the exact nature and functions of what is called Physiological Psychology, we must adhere resolutely to two positions, which to some may seem opposed, but are really confirmatory of each other. I. It is by self-consciousness that in the first instance,

and in the last instance, and throughout, we know the actings of the mind. We assume, what every one admits, that there are a special set of phenomena, that is, observed facts, which we denominate mental or psychical: such are sensations, perceptions, judgments, hopes and fears. These are not perceived by the senses. No man ever saw a recollection or touched an emotion. We have an inward as well as an outward sense, and we are conscious of them. We are more, we are conscious of them as acts of self. They are not memories or feelings indefinite, or of our neighbors, but of ourselves. We thus know self always in particular modes and activities. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. **Dictionary of Psychology and Psychiatry** Feb 16 2022 Widely used for many years by both students, scientists and other specialists, as well as translators, the two-volume German-English / English-German Dictionary of Psychology and Psychiatry is the most exhaustive bilingual compilation of terminology in these fields available. In this brand new edition, the Dictionary of Psychology and Psychiatry has been fully revised and updated, and substantially expanded by the addition of new entries. The increasing standardization of scientific terminology in psychiatry has thus been taken account of in the new edition. Overall, around 4,000 terms from the fields of psychology and psychiatry have been added in this new edition, bringing the total to around 35,000 in each language. In addition to numerous words and terms from psychology and psychiatry in general that have been added, particular importance was also placed on including new terminology from the areas of biological psychology, personality psychology, methodology, and computer-based assessment, as well of course as relevant terms from fields such as computing and the internet. At the same time, corrections and changes of usage since the previous edition have been included, and some terms that have in the meanwhile become obsolete have been removed. The new German spelling and orthography is used throughout.

**The Critique of Psychology** Dec 14 2021 Closely paralleling the history of psychology is the history of its critics, their theories, and their contributions. The Critique of Psychology is the first book to trace this alternate history, from a unique perspective that complements the many existing empirical, theoretical, and social histories of the field. Thomas Teo cogently synthesizes major historical and theoretical narratives to describe two centuries of challenges to—and the reactions of—the mainstream. Some of these critiques of content, methodology, relevance, and philosophical worldview have actually influenced and become integrated into the canon; others pose moral questions still under debate. All are accessibly presented so that readers may judge their value for themselves: - Kant's critique of rational and empirical psychology at the end of the 18th century - The natural-scientific critique of philosophical psychology in the 19th century - The human-scientific critique of natural-scientific psychology - The Marxist traditions of critique - Feminist and postmodern critiques and the contemporary mainstream - Postcolonial critiques and the shift from cross-cultural to multicultural psychology This is not a book of critique for critique's

sake: Teo defines the field as a work in progress with goals that are evolving yet constant. In emphasizing ethical and political questions faced by psychology as a discipline, this visionary book points students, academics, and practitioners toward new possibilities for their shared future.

*Psychology from the Standpoint of the Subject* Feb 04 2021 This book introduces the groundbreaking work of the German critical psychologist Klaus Holzkamp. In contrast to contemporary psychology's worldlessness, the writings present a concept of psychology based on the individual's relations to the world and open up new perspectives on human subjectivity, agency and the conduct of everyday life.

**Learning Disabilities and Brain Function** Feb 22 2020 The present edition of this book is a revision and expansion of the first two editions which appeared in 1980 and 1985, and in German translation in 1991. More than half of the present volume includes new material, and what has been retained from the former editions has been largely rewritten and updated with new research findings. A completely new chapter has been added on "Attention Deficit Disorder. " The author of the earlier editions (W.H.G.) has been joined by a coauthor (D.E.), and their combined elementary, high school, and university teaching and clinical experience totals approximately seventy-five years. Both of us have directed our professional energies to understanding the puzzle of human learning, especially academic learning, of those students who, despite apparently normal intelligence and opportunity, have varying degrees of difficulty in acquiring ideas and skills that are easily mastered by others. Until about fifty years ago there was a common tendency to equate academic success with intelligence, and those students who could not meet the demands of the prescribed program were usually required to repeat the same grade with a repetition of the same discouraging treatment that had been unsuccessful the first time.
