COOL AND LAM RETURN - IN THE CASE OF A LIFETIME Erle Stanley Gardner was not just the creator of PERRY MASON - at the time of his death, he was the best-selling American author of all time, with hundreds of millions of books in print. Among those books were the 29 cases of the brash, irresistible detective team of Bertha Cool and Donald Lam. Last year, Hard Case Crime brought out the first new Cool and Lam novel in decades, THE KNIFE SLIPPED, lost for 77 years after Gardner's publisher refused it. Now, we're bringing you the book Gardner wrote to replace it, often considered the best in the series: TURN ON THE HEAT. Hired by a mysterious "Mr. Smith" to find a woman who vanished 21 years earlier, Donald Lam finds himself facing a sadistic cop, a desperate showgirl, a duplicitous client, and one very dogged (and beautiful) newspaper reporter - while Bertha Cool's attempts to cut herself in on this lucrative opportunity land them both hip-deep in murder... NYPD Homicide Detective Nikki Heat gets more mystery than she imagined when she arrives at her latest crime scene. The body of an unidentified woman has been found stabbed to death and stuffed inside a suitcase left sitting on a Manhattan street. A startling enough death, but an even bigger shock comes when this new homicide surprisingly connects to the unsolved murder of Detective Heat's own mother. The gruesome killing of this Jane Doe launches Heat on a dangerous and emotional investigation, rekindling the cold case that has haunted her since she was nineteen. Paired once again with her romantic and investigative partner, top journalist Jameson Rook, Heat works to solve the mystery of

the body in the suitcase while she also digs into unexplored areas of her mother's background—areas Nikki has been afraid to confront before, but now must. Facing relentless danger as someone targets her for the next kill, Heat's search will unearth painful family truths, expose a startling hidden life, and cause Nikki to reexamine her own past. Heat's passionate quest takes her and Rook from the back alleys of Manhattan to the avenues of Paris, trying to catch a ruthless killer. The question is, now that her mother's cold case has unexpectedly thawed, will Nikki Heat finally be able to solve the dark mystery that has been her demon for ten years? From the world-famous creator of "Perry Mason," Erle Stanley Gardner - at his death the best-selling American writer of all time - comes another baffling case for the Cool & Lam detective agency: TURN ON THE HEAT. Return to the sizzling 1940s as Bertha Cool and Donald Lam investigate a missing woman, a desperate husband, a politician with a past, and a femme fatale with a future...assuming she doesn't go to jail for murder! Featuring brand new cover art that is a posthumous collaboration between Laurel Blechman and the legendary Robert Maguire - the first new Maguire cover in decades! In the context of climate change, world population growth and crashing ecological systems, wildfire is often a catastrophic and traumatic event. Its impact can include loss of life, life-changing injuries, long-term psychological stress; increases in domestic violence; destruction of properties, business and livestock; long-term housing insecurity; increased insurance premiums, fire-fighting, legal and health costs; as well as significant changes and species losses in the natural environment. In Australia, an average of 4,500 wildfires occur weekly. Yet how to prevent these wildfires, 85% of which are caused by human activities, has received extraordinarily little attention. The current approach to the prevention of arson can be summarised as small in scale, uncoordinated and rarely evaluated. 'Feeling the heat: International perspectives on the prevention of wildfire ignition' is the culmination of over a decade of research into wildfires and arson; taking an interdisciplinary approach to comprehensively understand the topic. This book reviews current international knowledge and presents new findings on political, spatial,

psychological, socio-ecological and socio-economic risk factors. It argues that if we are to reverse the increasing occurrence and severity of wildfires, all prevention approaches must be utilised, broadening from heavy reliance on environmental modification. Such prevention measures range from the critical importance of reducing greenhouse gases to addressing the psychological and socio-economic drivers of arson. In particular, it calls for a coordinated and collaborative approach across sectors, including place-based, state and country coordination, as well as an international body. It will hold appeal for researchers and students from a range of disciplines and interests, government planners and policymakers, emergency services, counsellors and NGOs, and those in agriculture and forestry. "An ambitious, remarkably frank" chronicle of the Philadelphia Eagles' bid for the NFL championship by the #1 New York Times-bestselling author (Kirkus Reviews). In 1992, the Philadelphia Eagles—a team assembled in the image of their iconoclastic, controversial former head coach, Buddy Ryan—were known for their ferocious defense led by Reggie White, Seth Joyner, and Andre Waters, and for the otherworldly talents of quarterback Randall Cunningham. Now was the time for the Eagles' campaign for the championship. But as the season progressed, it disintegrated into an ugly flurry of greed, racism, violence, personal and professional feuds, one tragic death, and a very wild face-off in the stands between a player's wife and mistress. By midseason, the sentiment of both fans and press was the same: "shut up and play." Told through the personal stories of the teammates themselves, as well as the coaches, managers and owner, Bringing the Heat spares nothing—and no one—in "a phenomenal feat of reportage, perfect for football fans coast to coast" (H. G. Bissinger, author of Friday Night Lights). "Overflows with stories of pro football dreams, of bravery in the face of injury. Yet it also unflinchingly tells of the darker side of life in the NFL: uncontrollable egos, ruined families, marital infidelity." —The New York Times Book Review "There are now four mandatory books on football: Dan Jenkins's Semi-Tough; George Plimpton's Paper Lion; H. G. Bissinger's Friday Night Lights, and the hilarious, incorrigible son of them all, Mark Bowden's Bringing the Heat." —Michael

Bamberger, Sports Illustrated The New York Times bestselling author “brings back her irresistibly humorous, snarky, action packed, violent and outrageously larger than life dragons” (Smexy Books). HE SAYS . . . I, Aidan the Divine, am, well divine. My name was given to me by the Dragon Queen herself! I’m a delight! Cheerful. Charming. And a mighty warrior who is extremely handsome with a very large and well-hidden hoard of gold. I am also royal born, despite the fact that most in my family are horrendous beings that don’t deserve to live. And yet, Branwen the Awful—a low-born, no less—either tells me to shut up or, worse, ignores me completely. SHE SAYS . . . I’ll admit, I ignore Aidan the Divine because it annoys him. A lot. But, we have so much to do right now, I can’t worry about why he keeps looking at me like he’s thinking about kissing me. We have our nations to save and no time for such bloody foolishness . . . no matter how good Aidan looks or how long his spiked tail is. Because before this war destroys everything we love, we’ll have to face our enemies together. But if we make it out alive, who knows what the future will hold . . . Praise for the Dragon Kin Series “Aiken’s patented mix of bloodthirsty action, crazy scenarios and hilarious dialogue have made this series a truly unique pleasure.”—RT Book Reviews (4½ Stars) “A chest thumping, mead-hall rocking, enemy slaying brawl of a good book.”—All Things Urban Fantasy “Laugh-out-loud funny—I loved it!”—Thea Harrison, New York Times bestselling author “A hot-hot series.” —Library Journal & From meteorologist and Peabody Award-winning journalist Bonnie Schneider, an innovative look at how climate change is already threatening our mental and physical health and practical tips for you to tackle these challenges head on. The impacts of climate change have become dire. Rising temperatures, volatile weather, and poor air quality affect our physical and mental health in dangerous new ways. From increasing the risk of infectious disease to amplifying emotional stress and anxiety—even the healthiest among us are at risk. Bonnie Schneider has tracked environmentally-linked physiological impacts throughout her career as a TV journalist, meteorologist, and the founder of Weather & Wellness©—a platform that explores the connection between weather, climate change, and health. In

Taking the Heat, Schneider provides crucial advice from science experts and medical professionals to help you: -Cope with the mental anguish of “eco-anxiety” and other climate change fears for our planet’s future, particularly expressed by millennials and Gen-Z -Identify health hazards caused by extreme heat and air pollution that disproportionately affect low-income and minority communities -Uncover the science behind longer and stronger allergy seasons and learn new ways to reduce your risk of adverse allergic reactions -Detect the increased threat of dangerous pathogens lurking in unexpected places and why we may face future pandemics -Understand how seasonal fluctuations of sunlight, heat, and humidity can not only factor into feelings of depression and anxiety but also can trigger flare-ups for certain auto-immune diseases - Discover how meditation and mindfulness practices can ease the psychological stress that often occurs in the aftermath of devastating natural disasters -Explore how the Earth’s rising temperatures may rob you of restorative sleep and impair mental sharpness -Learn why increased levels of CO2 in the atmosphere may reduce the availability of what you choose to eat; learn sustainable solutions—from food to fitness - And more! Anchored in the latest scientific research and filled with relatable first-person stories, this book is the one guide you need to navigate the future of your own health—mind, body, and spirit, in a rapidly changing environment. * Throughout the late-seventies and eighties, Van Halen were the archetypal American rock group. What’s more they were also the highest paid band in the history of show business, taking a cool \$1 million for a night's work at a festival in 1983 and making the Guinness Book of Records. This autobiography tells their story. In *The Heat of the Day*, Elizabeth Bowen brilliantly recreates the tense and dangerous atmosphere of London during the bombing raids of World War II. Many people have fled the city, and those who stayed behind find themselves thrown together in an odd intimacy born of crisis. Stella Rodney is one of those who chose to stay. But for her, the sense of impending catastrophe becomes acutely personal when she discovers that her lover, Robert, is suspected of selling secrets to the enemy, and that the man who is following him wants Stella herself as the price of his

silence. Caught between these two men, not sure whom to believe, Stella finds her world crumbling as she learns how little we can truly know of those around us. Provides an overview of the history and key personalities connected with the team that joined the NBA as an expansion team in 1987. This book consists of chapter-length visits to world "hot" spots, where people are already coping with the consequences of climactic disruption. It reveals the process of climate change to be ongoing, serious and immediate. Heat-transfer data from four wind-tunnel experiments and two free-flight experiments with turbulent boundary layers have been examined to see whether or not they are well represented by the Reynolds analogy or a modification thereof. The heat-transfer results are put into the form of dimensionless Stanton numbers based on fluid properties at the outer edge of the boundary layer and are compared with skin-friction coefficients for the same Mach numbers and wall to free-stream temperature ratios as obtained from an interpolation of the existing skin-friction data. The effective Reynolds number is taken to be the length Reynolds number measured from the effective turbulent origin, a position which differs importantly from the leading edge of the test surface in some cases. With his trademark humor and wit, Dr. Leman offers frank answers to the questions all of us have about sex. An exuberant debut that sweeps across the twentieth century—beginning where one world-famous love story left off to introduce us to another With Sophie Tucker belting from his hand-crank phonograph and a circle of boarding-school admirers laughing uproariously around him, Ben "Trouble" Pinkerton first appears to us through the amazed eyes of his Blaze Academy schoolmate, the crippled orphan Woodley Sharpless. Soon Woodley finds his life inextricably linked with this strange boy's. The son of Lieutenant Benjamin Pinkerton and the geisha Madame Butterfly, Trouble is raised in the United States by Pinkerton (now a Democrat senator) and his American wife, Kate. From early in life, Trouble finds himself at the center of some of the biggest events of the century—and though over time Woodley's and Trouble's paths diverge, their lives collide again to dramatic effect. From Greenwich Village in the Roaring Twenties, to

WPA labor during the Great Depression; from secret work at Los Alamos, New Mexico, to a revelation on a Nagasaki hillside by the sea—Woodley observes firsthand the highs and lows of the twentieth century and witnesses, too, the extraordinary destiny of the Pinkerton family. David Rain's *The Heat of the Sun* is a high-wire act of sustained invention—as playful as it is ambitious, as moving as it is theatrical, and as historically resonant as it is evocative of the powerful bonds of friendship and of love. After 16 incredible seasons in the NBA, Dwyane Wade is calling it a career. During his unforgettable run with the Miami Heat, Wade captured three NBA championships, an NBA Finals MVP, and was a 13-time All-Star on his way to establishing himself as the most popular figure ever in Miami sports, the best player in franchise history, and undoubtedly a future Hall of Famer. *Dwyane Wade: Heart of the Heat* is the ultimate tribute to this superstar as he wraps up a legendary career, spanning 16 years of basketball brilliance. Including dozens of full-color photographs, fans will journey from Wade taking the NBA by storm in his rookie year, to his three NBA titles, to his indelible style and influence off the court with his wife Gabrielle Union, to his heartfelt return to Miami to conclude his spectacular career. A must-have keepsake for Heat fans and D. Wade aficionados alike, *Dwyane Wade* is the perfect commemoration of a Heat icon and Miami legend. The #1 Bestseller! Michael Arroyo has a pitching arm that throws serious heat along with aspirations of leading his team all the way to the Little League World Series. But his firepower is nothing compared to the heat Michael faces in his day-to-day life. Newly orphaned after his father led the family's escape from Cuba, Michael's only family is his seventeen-year-old brother Carlos. If Social Services hears of their situation, they will be separated in the foster-care system—or worse, sent back to Cuba. Together, the boys carry on alone, dodging bills and anyone who asks too many questions. But then someone wonders how a twelve-year-old boy could possibly throw with as much power as Michael Arroyo throws. With no way to prove his age, no birth certificate, and no parent to fight for his cause, Michael's secret world is blown wide open, and he discovers that family can come from the most unexpected sources. Perfect for any Little

Leaguer with dreams of making it big--as well as for fans of Mike Lupica's other New York Times bestsellers *Travel Team*, *The Big Field*, *The Underdogs*, *Million-Dollar Throw*, and *The Game Changers* series, this cheer-worthy baseball story shows that when the game knocks you down, champions stand tall. Pulitzer Prize-winning journalist Ross Gelbspan exposes the machinations of oil and coal companies and conservative politicians to undermine the public confidence in science and thereby defer action against global warming. This riveting expose is a spirited call to action against the corporate disinformation campaign that threatens us all. A fan-favorite from USA TODAY bestselling author Victoria Dahl, originally published in 2015. Passion this hot can't be faked... All revved up for bright lights and steamy nights, writer Veronica Chandler chased her dreams to New York City. When she hit a dead end, reality sent her back home to Jackson Hole, Wyoming. Saving her pride and her new gig—writing a relationship advice column!—requires some faking. No one can know the truth about her big-city flop or her nonexistent sex life. But the town's irresistibly rugged librarian is determined to figure her out...and give her hands-on lessons in every wicked thing she wants to know. Gabe MacKenzie's heart might be in Wyoming, but secretly his future's tied up in his family's Manhattan legacy. Getting down and dirty with Veronica is supposed to give him a few memorable nights—not complicate his plans. But the thing about heat this scorching is there's just no going back...and it might be too hot for either of them to take. E.P.'s super-sensitive snout has warned him that Earth's thermostat has gone haywire! He sets out to see how global warming is upsetting the balance in Earth's ecosystems. He sees that glaciers are melting and sea levels are rising. Some places are flooding while others are too dry. E.P. lets us know what we can do to live Green and fight this damage before our planet gets too hot. Looking Glass Library is an imprint of Magic Wagon, a division of ABDO Group. Grades P-4. "A classic. I can't recommend it enough."--Chris Hayes On Thursday, July 13, 1995, Chicagoans awoke to a blistering day in which the temperature would reach 106 degrees. The heat index, which measures how the temperature actually feels on the body, would hit 126 degrees

by the time the day was over. Meteorologists had been warning residents about a two-day heat wave, but these temperatures did not end that soon. When the heat wave broke a week later, city streets had buckled; the records for electrical use were shattered; and power grids had failed, leaving residents without electricity for up to two days. And by July 20, over seven hundred people had perished—more than twice the number that died in the Chicago Fire of 1871, twenty times the number of those struck by Hurricane Andrew in 1992—in the great Chicago heat wave, one of the deadliest in American history. Heat waves in the United States kill more people during a typical year than all other natural disasters combined. Until now, no one could explain either the overwhelming number or the heartbreaking manner of the deaths resulting from the 1995 Chicago heat wave. Meteorologists and medical scientists have been unable to account for the scale of the trauma, and political officials have puzzled over the sources of the city's vulnerability. In *Heat Wave*, Eric Klinenberg takes us inside the anatomy of the metropolis to conduct what he calls a "social autopsy," examining the social, political, and institutional organs of the city that made this urban disaster so much worse than it ought to have been. Starting with the question of why so many people died at home alone, Klinenberg investigates why some neighborhoods experienced greater mortality than others, how the city government responded to the crisis, and how journalists, scientists, and public officials reported on and explained these events. Through a combination of years of fieldwork, extensive interviews, and archival research, Klinenberg uncovers how a number of surprising and unsettling forms of social breakdown—including the literal and social isolation of seniors, the institutional abandonment of poor neighborhoods, and the retrenchment of public assistance programs—contributed to the high fatality rates. The human catastrophe, he argues, cannot simply be blamed on the failures of any particular individuals or organizations. For when hundreds of people die behind locked doors and sealed windows, out of contact with friends, family, community groups, and public agencies, everyone is implicated in their demise. As Klinenberg demonstrates in this incisive and gripping account

of the contemporary urban condition, the widening cracks in the social foundations of American cities that the 1995 Chicago heat wave made visible have by no means subsided as the temperatures returned to normal. The forces that affected Chicago so disastrously remain in play in America's cities, and we ignore them at our peril. For the Second Edition Klinenberg has added a new Preface showing how climate change has made extreme weather events in urban centers a major challenge for cities and nations across our planet, one that will require commitment to climate-proofing changes to infrastructure rather than just relief responses. "Michael Mann, four-time Oscar-nominated filmmaker and writer-director of Heat, Collateral, Thief, Manhunter, and Miami Vice, teams up with Edgar Award-winning author Meg Gardiner to deliver Mann's first crime novel - an explosive return to the world and characters of his classic film Heat - an all-new story that illuminates what happened before and after the iconic film"-- For sharp-tongued food critic Miranda Wake, the chance to spend a month in Adam Temple's kitchen to write an exposé is a journalistic dream come true. Surely Miranda can find a way to cut the hotshot chef down to size once she learns what really goes on at his trendy Manhattan restaurant. But she never expected Adam to find out her most embarrassing secret: she has no idea how to cook. Adam's not about to have his reputation burned by a critic who doesn't even know the difference between poaching and paring. He'll just have to give the tempting redhead a few private lessons of his own—teaching her what it means to cook with passion...and doing more with his hands than simply preparing sumptuous food. This dissertation deals with the experimental and simulative investigation of waste heat recovery from combustion engine exhaust gas in passenger car applications. The focus of the investigations lies on the thermodynamic cycle according to Rankine. The boundary conditions of combustion engines and the limitations of an automobile cause new operating conditions and system operating parameters for Rankine-systems, which will be discussed within this work. The system operating parameters were judged based on their potential to improve the efficiency of a running system, by setting the optimal values for each individual

situation. Alternative circuit variants were investigated alongside of the basic configuration, which allowed additional heat input into the system and thereby increase the power output of the Rankine-system. Another operative influence on a waste heat recovery system that was analyzed was the importance of engine operating parameters. This on one hand lays groundwork and on the other hand displays the potentials of different system combinations. The knowledge gained during stationary operation is transferred to dynamic operation in the following. Cold start was chosen as the most important variant of dynamic operation. Results from measurements at starting temperatures down to -10C are presented. These include the first published measurements of temperature and power output for such scenarios. The basics of the behavior of a Rankine-system in cold start are extended by the impact of system operating parameters and circuit configurations. Possible synergies through different kinds of connection from the condenser to the coolant system were investigated as a completing facet of the holistic system view. The target of these investigations was to identify potentials for improvements in the cold start of the automobile by utilizing the heat that is available at the condenser.
