Late seventeenth- and early eighteenth-century England - the period between the Restoration and the South Sea Bubble - was dramatically transformed by the massive cost of fighting wars, and, significantly, a huge increase in the re-export trade. This book seeks to ask how commerce was legitimated, promoted, fashioned, defined and understood in this period of spectacular commercial and financial 'revolution'. It examines the packaging and portrayal of commerce, and of commercial knowledge, positioning itself between studies of merchant culture on the one hand and of the commercialisation of society on the other. It focuses on four main areas: the Royal Exchange where the London trading community gathered; sermons preached before mercantile audiences; periodicals and newspapers concerned with trade; and commercial didactic literature. The series' aim was to give coverage to important areas of research, to introduce new active substances with therapeutic potential and to call attention to unsolved problems. This objective has not changed. The table of contents of the present volume makes evident, however, that the search for new medicines has become increasingly complex, and additional, new disciplines have entered the research arena. The series now includes reviews on biochemical, biological, immunological, physiological and medicinal aspects of drug research. Researchers actively engaged in the various scientific fields forming the entity of drug research can benefit from the wealth of knowledge and experience of the respective authors, and will be assisted in their endeavour to discover new pharmaceutical agents. Those simply wanting to keep abreast of new developments in the complex, multi-discipline science can turn to the "Progress in Drug Research" volumes as an almost encyclopaedic source of information without having to consult the innumerable original publications. Volume 33 contains 13 reviews, a subject index, an index for the close to 400 articles published in the series so far, and an author and titles index for all 33 volumes. Long recognized as more than the writings of a dozen or so philosophes, the Enlightenment created a new secular culture populated by the literate and the affluent. Enamoured of British institutions, Continental Europeans turned to the imported masonic lodges and found in them a new forum that was constitutionally constructed and logically egalitarian. Originating in the Middle Ages, when stone-masons joined together to preserve their professional secrets and to protect their wages, the English and Scottish lodges had by the eighteenth century discarded their guild origins and become an international phenomenon that gave men and eventually some women a place to vote, speak, discuss and debate. Margaret Jacob argues that the hundreds of masonic lodges founded in eighteenth-century Europe were among the most important enclaves in which modern civil society was formed. In France, the Netherlands, Belgium, and Britain men and women freemasons sought to create a moral and social order based upon reason and virtue, and dedicated to the principles of liberty and equality. A forum where philosophers met with men of commerce, government, and the professions, the masonic lodge created new forms of self-government in microcosm, complete with constitutions and laws, elections, and representatives. This is the first comprehensive history of Enlightenment freemasonry, from the roots of the society's political philosophy and evolution in seventeenth-century England and Scotland to the French Revolution. Based on never-before-used archival sources, it will appeal to anyone interested in the birth of modernity in Europe or in the cultural milieu of the European Enlightenment. The publication of Hans Urs von Balthasar's seven-volume The Glory of the Lord established von Balthasar as one of the greatest and most influential Catholic theologians of the twentieth-century. It was the mother church of the diocese, a principal landowner in the capital and surrounding countryside, and a theatre for the enactment of events of national importance. The cathedral was also a powerhouse of commemoration and intercession, where prayers and requiem masses were offered on a massive scale for the salvation of the living and the dead. This spiritual role of St Paul's Cathedral was carried out essentially by the numerous chantry priests working and living in its precinct. Chantries were pious foundations, through which donors, clerks or lay, male or female, endowed priests to celebrate intercessory masses for the benefit of their souls. At St Paul's Cathedral, they were first established in the late twelfth century and, until they were dissolved in 1548, they contributed greatly to the daily life of the cathedral. They enhanced the liturgical services offered by the cathedral, increased the number of the clerical members associated with it, and intensified relations between the cathedral and the city of London. Using the large body of material from the cathedral archives, this book investigates the chantries and their impacts on the life, services and clerical community of the cathedral, from their foundation in the early thirteenth century to the dissolution. It demonstrates the flexibility and adaptability of these pious foundations and the various contributions they made to medieval society; and sheds light on the men who played a role which, until the abolition of the chantries in 1548, was seen to be crucial to the spiritual well-being of medieval London.
