Focusing on the key challenges that still impede the realization of the billion-ton renewable fuels vision, this book integrates technological development and business development rationales to highlight the key technological developments that are necessary to industrialize biofuels on a global scale. Technological issues addressed in this work include fermentation and downstream processing technologies, as compared to current industrial practice and process economics. Business issues that provide the lens through which the technological review is performed span the entire biofuel value chain, from financial mechanisms to biotechnology start-ups in the biofuel arena up to large field manufacturing projects, to raw material farming, collection and transport to the bioconversion plant, manufacturing, product recovery, storage, and transport to point of sale. Emphasis has been placed throughout the book on providing a global view that takes into account the industrial characteristics of various biofuels markets from Brazil, the EU, the US, or Japan, to emerging economies as agricultural development and biofuel development appear undissociably linked. From Oil to Gas and Beyond chronicles the history of the petroleum industry in Trinidad and Tobago and approaches

major policy decisions impacting its economy. The book details the macroeconomic, commercial, and technical challenges faced by Trinidad and Tobago in the monetization of its oil and gas resources over the past one hundred years. The contributors cover several topics including local content, national participation, sustainability, communication, leadership, energy diplomacy, environmental law and macroeconomic policy. The Jan. 1956 issue includes Fluid power engineering index, 1931-55. Div Robert Clark was appointed professor and chair of energy strategy and policy at the University of New South Wales in 2012. Assessment is a concept familiar across the field of edu

and is inherent to the work of professors, administrators, teachers, researchers, journalists, and scholars. A multifaceted and politically charged topic, assessment ranges from informal interactions with learners in classrooms to systematic high-stakes testing and examination. Written by a leading expert on assessment, this book situates the topic within the broader context of educational psychology research and theory and brings it to a wider audience. With chapters on the fundamentals of assessment, explanations of its uses, and advice for best application, this concise volume is designed for any education course that includes assessment in the curriculum. It will be indispensable for student researchers and both pre- and in-service teachers alike. Includes: The British or imperial almanac, A Companion to the British imperial calendar, and An Alphabetical index to the imperial calendar (title varies), Modular Systems for Energy and Fuel Recovery and Conversion surveys the benefits of the modular approach in the front end of the energy industry. The book also outlines strategies for managing modular approaches for fossil, renewable, and nuclear energy resource recovery and conversion with the help of successful industrial examples. The book points out that while the modular approach is applicable for distributed and small-scale energy systems, it is also often used for parts of large-scale centralized systems. With the help of successful industrial examples of modular approaches for energy and fuel recovery and conversion, the book points out the need for more balance between large

centralized systems and small-scale distributed systems serve the energy needs of rural and isolated communities. Coal, oil, natural gas, hydrogen, biomass, waste, nuclear, geothermal solar, wind, and hydro energy are examined, showing that modular operations are very successfully used in all these components of the energy industry. Aimed at academic researchers and industry professionals, this book provides successful examples and analysis of the modular operation for energy and fuel recovery and conversion. It is also a reference for those who are engaged in the development of modular systems for energy and fuel recovery and conversion. From the airlines we fly to the food we eat, how a tiny group of corporations have come to dominate every aspect of our lives—by one of our most intrepid and accomplished journalists "If you're looking for a book . . . that will get your heart pumping and your blood boiling and that will remind you why we're in these fights—add this one to your list." —Senator Elizabeth Warren on David Dayen's Chain of Command: The Untold Story of How a Handful of Corporations Took Title Over the last forty years our choices have narrowed, our opportunities have shrunk, and our lives have become governed by a handful of very large and very powerful corporations. Today, practically everything we buy,

everywhere we shop, and every service we secure come from a heavily concentrated market. This is a world where four major banks control most of our money, four airlines shuttle most of us around the country, and four major cell phone providers connect most of our communications. If you are sick, you can go to one of three main pharmacies to fill your prescription, and if you end up in a hospital almost every medical accessory to heal you comes from one of a handful of large medical suppliers. Dayen, the editor of the American Prospect and author of the acclaimed Chain of Title, provides a riveting account of what it means to live in this new age of monopoly and how we might resist this corporate hegemony. Through vignettes and vivid case studies Dayen shows how these monopolies have transformed us, inverted us, and truly changed our lives, at the same time providing readers with the raw material to make monopoly a consequential issue in American life and revive a long-dormant antitrust movement. Prisoners released from our bloated American correctional institutions return to a mostly unwelcoming society where they face onerous post-release challenges. No wonder recidivism is near fifty percent, adding tens of billions of dollars annually to the cost of American prisons. *Sisyphus No More* is a multifaceted argument for increasing prisoner education and training programs to promote the reintegration into society of returning prisoners and increase the likelihood of their securing living-wage jobs. By greatly reducing recidivism, such programs will pay for themselves several times over. Such programs also humanize the treatment of prisoners and help them escape the fate of Sisyphus, the mythological king condemned to a bitterly repetitive fate. The book has two parts. The first provides background on the American prison system and enumerates the tolls incarceration takes on prisoners, their families, and their communities and the costs released prisoners continue to pay that severely hinder their reintegration. In the second part, the authors set forth compelling psychological, sociological, ethical, and financial grounds for increasing education and training to support the reintegration of released prisoners. The final two chapters report on innovative prison education programs and identify steps toward making education and training a priority in our prisons. *Popular Mechanics* inspires, instructs and influences readers to help them master the modern world.
