Spanish City Planning in North America Dec 03 2020 In examining North American Spanish cities, this book presents a neglected aspect of American urban history.

*Golden Child* Jan 16 2022 THE STORY: In the winter of 1918, progressive Chinese landowner Eng Tieng-Bin's interest in Westernization and Christianity sets off a power struggle among his three wives, which will determine the future of his daughter, Ahn, Tieng-Bin's favorite,

*Land-Use Controls in the United States* Dec 23 2019 This book provides a comprehensive and readable account of the American system of controlling the private use of land -- the public control of private development. It explains the general, social, legal, and political context and the historical origin of these controls. It provides a technical description of the main methods (zoning and subdivision control) and identifies recent innovations in technique. The objectives of control and its effectiveness are considered, and some parallels with British experience are explored. In a final chapter, "Retrospect and Prospect -- 1969," written especially for this new edition, developments of the past ten years and prospects for the future are discussed. The book is intended to provide an introduction to the subject for all those whose work or studies require some acquaintance with land-use controls -- students of planning, law, social administration, and politics; professional planners, zoning lawyers; elected representatives. It is also intended to provide the foreign visitor or observer with a clear account of American methods of land-use control and a general introduction to the American planning scene. There is no other book that deals with this subject in a similar way. There are legal textbooks that record the case law in excessive detail, and there are planning textbooks that deal with the techniques in an uncritical way, unrelated to the historical, political, and administrative context.

**The Office Industry: Patterns of Growth and Location** Jun 28 2020 "A Report of the Regional Plan Association" The Regional Plan Association is an unofficial nonprofit organization founded to undertake research and recommend policies aimed at improving the environmental and social aspects of the region extending into three states with New York City as its focal point. It is also committed to publishing its findings and proposals. This report was prepared for the association by Regina Belz Armstrong and was edited by Boris Pushkarev and Alan Donheiser. The report indicates that the number of office jobs and the new office space needed will approximately double in the New York region by the year 2000 and will increase even more rapidly for the nation as a whole. An article on the report that appeared in "Business

Week" states that it "is aimed at a 31-county, 13,000-sq.-mi. region in New York, New Jersey, and Connecticut. But it bristles with figures and concepts important to all U.S. metropolitan areas, especially the 25 that have a million or more population. Its message is one of hope strongly laced with somber warnings." Summarizing the report's forecasts and recommendations, the "Business Week" account continues as follows: "Office jobs over the past decade or so have powered whatever growth cities have achieved and moderated any declines. Now, the flight of corporations from Manhattan and other city cores is quickening. In this context, the RPA study raises critical questions about the future shape and vitality of cities and suburbs alike." The essence of the RPA analysis: The coming expansion in office jobs and the resulting office building construction can save cities or destroy the countryside. Directed into central cities, or subsidiary cities and urban centers, new offices could underpin their economy, stimulate mass transit, and provide investment for redesigning downtown areas to make them more efficient and pleasant. But if present trends accelerate, this growth could soak up thousands of acres of valuable suburban land, wipe out what little public transit remains, generate endless miles of highways and parking lots, create unsightly and wasteful commercial strips along roads, ultimately reproduce many of the problems that now afflict the cities."

The Judas Kiss Nov 13 2021 Portraying the two critical moments in Oscar Wilde's late life -- when he decides to stay in England and face imprisonment and the night after his release, two years later -- David Hare's *The Judas Kiss* presents the consequences of taking an uncompromisingly moral position in a world defined by fear, expedience, and conformity.

The Battle for the Life and Beauty of the Earth Apr 06 2021 Christopher Alexander's always controversial work raises issues critical to regenerating the environment and creating a new culture for building--and rebuilding--our cities, neighborhoods, buildings, and gardens. Demonstrates the application of Alexander's theories and methods to a large-scale project and shows how architecture can bring life to a community. The creative processes described in the book are for anyone who designs, builds, shapes, repairs, or otherwise modifies the built environment.

**Orthogonal Town Planning in Antiquity** Oct 01 2020 The present work examines Greek, Etruscan, Italic, Hellenistic, and Roman cities that were based on orthogonal or grid plans--those characterized by streets intersecting at right angles to form blocks of regular size and spacing.

**The Conservation of European Cities** Aug 30 2020 In recent years, the conservation of neighborhoods in American cities has risen to a high priority on the national agenda. The policy of demolishing whole neighborhoods in the inner city, whether to replace them with luxury apartments or massive public housing

projects, has been largely abandoned, and the return of the middle class, seeking housing bargains in the neighborhoods they fled years ago, has hastened the process. Europe has much to teach the United States about urban conservation: it was a pressing public concern there when in this country conservation was mainly a matter of protecting wildlife and wilderness areas. The twenty-two essays in this volume—while discussing the conservation experiences of major European cities that are of considerable interest in their own right—present a preview of some of the struggles and solutions that are emerging on this side of the Atlantic as the conservation movement grows and extends into more and more urban districts. "Urban pioneering" and "gentrification" are becoming increasingly common in this country as the middle class seeks—in the face of energy shortages and slower growth, especially in housing—to reclaim the core cities that so many had once abandoned for suburbia. The first part of the book is concerned with the conflicts and struggles that have occurred over urban redevelopment in such cities as Venice, Brussels and Bath. The essays in the second part of the book describe a number of conservation efforts and strategies in cities such as Bologna, Stockholm and London which have attempted integration of social and physical conservation. The emphasis throughout is on conservation in specific neighborhoods—some historic districts, others humble working-class residential areas, a few both at once—rather than on conservation at the metropolitan scale. The separate essays range over such diverse topics as the impact of large-scale development projects on the existing city, the conservation of city centers and historic neighborhoods, the protection of monuments, the eviction of low-income migrants, examples of gentrification, amenity and conservation legislation, participatory action groups, social conservation strategies, and the education of children in urban conservation. The editor, in his extensive introduction, brings all these themes together setting them in the postwar history of European planning, and discussing issues such as the effects of tourism on old cities, the current crisis for modern architecture and planning, conflicting views and styles of conservation, the processes of pioneering and gentrification, and the relevance of this experience to the United States. The illustrated case studies center on the cities of London, Bolton, Bath, Elsinore, Stockholm, Utrecht, Amsterdam, Brussels, Grenoble, Bologna, Rome, Venice, Split, Athens, and Istanbul.

**An Introduction to Urban Design** Mar 06 2021 The author uses his experience as an urban designer in New York City to examine the nature of city planning and how it can improve urban life.

**The New York Waterfront** Jul 30 2020 Created by a team of architects, historians, teachers, and students, The New York Waterfront is an unprecedented documentation of the rise and fall of the waterfront's architectural, technological, industrial, and commercial existence over the past 150 years. This densely illustrated book vividly presents and preserves the waterfront's development. Superb watercolor, ink, and pencil drawings—some specially created for this publication—as well as rare historic pictures, aerial photographs, and maps culled from a wide variety of sources and reproduced here for the first time, make this book the most comprehensive study on the subject. Newly commissioned photographs by Stanley Greenberg supplement this already rich array of images, often bringing out the melancholy beauty of the waterfront in its present derelict state. Also seen here are many major modern sites—the Red Hook Water Pollution Control Plant, the Port Authority Grain Elevators, the Fresh Kills Landfill, and the Brooklyn Navy Yard—capturing the nameless, inhospitable tracts whose only landmarks are the rusting remains of a once vital commercial life. This illustrative material, together with a series of informative texts written by critics and scholars, reveals a complete picture of the New York waterfront through contemporary projects and visionary proposals, environmental plans and master-planning, built and unbuilt waterfront structures (pier warehouses, recreation piers, markets, and ferry terminals), in addition to a meticulous analysis of a variety of documents and records. The New York Waterfront offers a unique perspective on waterfront building so that the lessons of the past can inform decisions about the future. This publication also inspires us to strive for an equivalent greatness when designing the urban fabric of the twenty-first century, the kind of greatness in public works that has in the past distinguished New York City.

*The Modern Metropolis* Feb 02 2021 The purpose of this collection is to present a clear, comprehensible, and highly readable book on the growth of modern cities and their planning.

**Builders of the Ancient World** Feb 23 2020 Describes the architectural and engineering feats which have been discovered and studied in Greece and Rome, in Mesoamerica, in South America, in India, in China, and at other sites.

**The Hot House** Apr 26 2020 The Hot House is in part a manifesto and in part a noncanonical history of the most progressive and heretical experiments in the applied arts and design. Covering two centuries of avantgarde designs, but concentrating on the 1950s to the present, the book looks at architecture and urban design as well as graphic, interior, exhibit, industrial, and fashion design. It discusses the role that such magazines as Casabella, Domus, and Modo have played on this lively front, and provides an insider's view of such figures and groups as Alessandro Mendini, Gaetano Pesce, Alichmia, Global Tools, Michele De Lucchi, Ettore Sottsass, and—the design world's hot new movement—Memphis. It also elucidates such concepts as banal design, soft design, radical architecture, and color cultures, and relates these and other design developments to social and political issues. Protagonist of many of these experiments, Andrea Branzi calls for a theory and practice in which the old methods and instruments - pencil, square, and compass - are rendered obsolete, and the formal commandments of modernism - comfort, function, and style - are banished. If Branzi's vision of the new domestic landscape bears any relation to the future home, the places we live and objects around us are on the verge of being radically transformed. The Hot House dramatically expands the theoretical and operative limits of design. While precedents to Il Nuovo Design (The New Design) can be found in everything from Art Deco to De Stijl to Pop Art to California funk, Italy is the center of this new phenomenon and the "hot house" of its most intense activity. Beginning in the 1960s, there emerged a number of design studios that went by names like Archizoom, 9999, Superstudio, and UFO; their products redefined the basic architecture of furniture and clothing and polemicized an entire discipline. Andrea Branzi, architect and designer, has been a leading force in Italian design since the 1960s. As the founder of Archizoom Associates and member of the experimental design collective Global Tools, he is responsible for many of the experiments described in this book. He lives and works in Milan, where he is Educational Director of Domus Academy and Editorial Director of Modo.

**Derby Days** Oct 13 2021 This is a look at all the derby matches, tracing the history of the hostility and showing the story from both sides—United and City. Attention is paid not just to the famous derbies, like Liverpool versus Everton, but to less-publicized confrontations such as Exeter versus Plymouth.

**Man's Struggle for Shelter in an Urbanizing World** Sep 11 2021 Industrialization and population explosion are contributing to an urban revolution in the developing countries of the world. Static social and economic conditions, frozen for hundreds of years, are rapidly being overturned. This book makes an important contribution to our understanding of various national programs and the efforts of international agencies directed toward achieving land reform and adequate housing. This is the first book on the subject. Charles Abrams, drawing heavily on his rich store of intimate practical experience, dramatically describes housing situations in Ghana, Turkey, Pakistan, the Philippines, Nigeria, Japan, Singapore, India, Puerto Rico, Venezuela, Jamaica, Ireland, Barbados, and Bolivia. His expert knowledge of the legal and financial aspects of land and housing problems is tempered by common sense observation of technical and social aspects, enriched by imaginative human concern, and made effective by a high degree of political realism. Man's Struggle for Shelter will benefit a wide audience of readers. The urban and regional planner, the housing official, the land economist, and government policy planners, both here and abroad, will find this book extremely important.
