Most of today's mid-size to large business enterprises and governmental agencies use electronic data interchange, or EDI, to interact with one another. EDI is a highly structured data communications system that is used to exchange commercial documents including purchase orders, invoices, electronic catalogs, and bid documents. "Demystifying EDI" is for two distinct audiences: those without a deep technical knowledge who want to know more about EDI and how it works, and those who may have some background in EDI implementation, transactions, and systems who wish to know more about EDI software for Windows-based desktop and network-connected PCs. The book is organized into three parts: Part 1 presents an overview for those who are unfamiliar with EDI. It shows readers how EDI works; examines EDI system requirements, features, and benefits; and provides information on EDI system evaluation. Part 2 provides hands-on experience with a working EDI system by stepping through the setup, configuration, and operation of Trading Partner Desktop, a full-featured Windows-based EDI application contained on the companion CD. The appendixes in

Part 3 contain detailed examples of transaction set guidelines and a glossary of EDI terms. Professional author and publishing executive Russell A. at the Institute of Business Informatics, University of Berne, Switzerland. In this effort I enjoyed a great deal of help from numerous others, including professional colleagues, interview partners, and members of my family. Even though I cannot possibly mention them all, I would like to express my sincere gratitude for their selfless support. Above all, I am grateful to Prof. Dr. Gerhard Knolmayer who contributed to the book both in its formative stages and throughout its development. He has been an unwavering source of encouragement during the many difficult stages of the investigation and I greatly benefitted from our discussions of the subject matter. Moreover, he was extremely generous with his time in carefully reviewing all the five chapters. The financial support for this book came from the Hasler Foundation in Berne. I wish to thank the Foundation, and especially its Managing Director, Dr. P.A. Jaeger, for funding the empirical part of the research project. Likewise, I am grateful to the University of Berne for providing me with the necessary computer and other resources. The Institute of Business Informatics should be commended particularly for its very stimulating work environment.
