Late Reconstructions of Injured Ligaments of the Knee May 27 2020
Different views about the biomechanics of the knee joint and late reconstruction of ligamentous injuries underline the obstacles impeding the establishment of generally acceptable principles for the treatment of such lesions. As late as June 1976, HUGHSTON emphasized in the Journal of Bone and Joint Surgery that in spite of excellent anatomic studies, substantial uncertainty still prevails in knee joint surgery. Even the significance of the anterior drawer sign for ruptures of the anterior cruciate ligament is interpreted quite diversely, as illustrated in a comparison of HUGHSTON, GIRGIS, TORG, and SCHIECK, who give varying opinions concerning the indication related to the age of the patient or possible earlier joint damage as well as concerning the prognosis for untreated knee joints. The question still remains as to how often an intra-articular ligamentous replacement should be carried out in addition to extra-articular techniques (DONOGHUE, SLOCUM, NICHOLAS, HUGHSTON). Lastly the question of synthetic ligament replacement must be clarified. After basic research has well advanced, clinical experience must be discussed. Statements concerning the therapeutic value of diverse procedures based solely on knowledge of the literature remain problematic. For this reason a workshop was held at the University of Heidelberg in the Orthopedic Clinic (Head: Prof. Dr. H. COTTA) in June 1977, with the aim of bringing together representatives of the different leading schools in a round table discussion to comment on still unsolved questions.

Bone and Joint Injuries Apr 30 2023 There currently is a clear tendency to an increasing number of accidental injuries in elderly people, in sport injuries and car crashes also in countries which recently joined the European Union and candidates to join the European Union. Patients expect very good functional results even after serious injuries. But in contrast to this development, Trauma Surgery as an independent field, is not yet established in all European countries. Therefore, it seems mandatory to compile a book that covers the state-of-the-art in Trauma Surgery. The book also serves to harmonise the practice of Trauma Surgery within the European Union, and to prepare for the exam of the U.E.M.S.

Cytokines and Joint Injury Dec 02 2020 *This topical insight in the role of cytokines in joint inflammation and joint destruction is important for a better understanding of key processes in diseases such as rheumatoid arthritis (RA) and osteoarthritis (OA). Apart from the impact of well-known and novel cytokines on joint tissues, the various chapters address the issue of targeted therapy with biological response modifiers and future interventions with carefully designed inhibitors. Special attention is given to elements of synovial cell activation, cell-cell interaction, cytokine interplay as well as mechanisms of cartilage destruction and bone erosion. New information on the novel cytokines IL-15, IL-17 and IL-18 and their position in the complex cytokine interplay is provided, in addition to an outline of the role of established cytokines, such as TNF, IL-1 and IL-6. Cytokine regulation of destructive enzymes, RANKL, the endogenous inhibitor OPG and their crucial roles as central players in joint erosion are highlighted. This volume gives a complete and balanced view on pivotal cytokines and joint pathology for the biomedical and clinical researcher.*

Repair and Regeneration of Ligaments, Tendons, and Joint Capsule Mar 05 2021 *A comprehensive and authoritative review of the most important scientific and clinically relevant topics today in ligaments, tendons, and capsular biology, including their biomechanics and surgical reconstruction. The authors review the basic science of tendons in the hand and shoulder ligaments, the current clinical status of the shoulder and cruciate ligaments, and the latest advances in research on the healing of ligament and tendon to bone, artificial ligaments, and gene therapy. They also cover the major type 1 collagen soft tissues that are of particular interest to upper extremity surgeons and sports medicine specialists.*
