Comprising a selection of articles dedicated to disaster management this volume focuses on the challenges arising from extreme natural phenomena and descriptions of methods for assessing their occurrence probability and of measures for mitigating their intensity and detrimental effects. The first group of articles describes general strategies for risk assessment and mitigation, providing examples in the context of various kinds of natural disasters. The economic impact of mitigation measures, communities' differing coping capabilities, human attitudes towards relocation and possible links to climate change are among the topics considered. Natural strategies are outlined in the contexts of Turkey, Brazil and United Arab Emirates. The second part of the book is concerned with disasters from specific natural causes starting with a group of ten articles on floods. The corresponding contributions address flood frequency, vulnerability and resilience of communities, response of small and medium enterprises, risk in terms of financial losses, private investment participation to mitigation measures, assessment of design solutions against flood hazard, sleeper dykes as a means of reducing risk, preparedness of hospitals, causes of highway flooding and their relative importance, and impact of floods on poor communities. The third set of articles are related to earthquake-related hazards describing, in particular, an analysis tool providing integrated risk, coping capacity and management output, a method for assessing vulnerability considering key contributing factors, a technique for urban aftershock management and damage assessment, and neural network modelling to estimate tsunami damage. Finally, a group of three articles address issues related to landslides, namely, slope management as a means of reducing risk and losses, early warning based on rainfall data, and hazard prediction using favourability function modelling and spatial target mapping software. Providing a unique global perspective this volume focuses on recent developments over a wide range of topics that cannot be found in similar, currently available, publications in this field. Regardless of their origin, fatty alcohol residues eventually enter the marine environment. They are also generated in situ by freshwater and marine organisms. These long chain alcohols can be used as biomarkers due to their distinctive source allocation, although they have differential degradation rates across the range of chain lengths." "This well-illustrated book sets out the natural and synthetic pathways, sources and signatures of these compounds, along with their concentrations in the environment, their toxicity and their eco-toxicity. For the first time, environmental data are presented from many locations around the world, with the observed anthropogenic contribution to the environmental concentrations being thoroughly discussed. This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews. In such situations the line between business and pleasure blurs and the nature of relationships gets cloudy. In that environment, people often cut not just financial corners, but the ethical ones, too. There's a fine line between innocent perks and inappropriate gifts or kickbacks. Event planners today must navigate a minefield of potentially sticky situations that can easily blow up in their face. Without a professional code, lines of acceptable behavior are easily crossed. And what you do personally can hurt you professionally. *Event Planning Ethics and Etiquette* provides event planners with the companion they need to stay out of trouble, keep professional relationships healthy and profitable, avoid the riskier temptations of the lifestyle, and win business in a highly competitive market using ethical business practices. Explains how to establish policies and codes of behavior, in the office and onsite at events. Offers guidelines on when it is acceptable to accept a gift, what is acceptable, and what is inappropriate. Shows how to prepare yourself, as well as your staff, for what to expect, and how to handle the unexpected with business finesse. Covers business etiquette in event planning crisis management situations. Helps you to avoid putting yourself and your company at personal and professional risk. Features real-life examples and situations, and advice on how to handle them with poise and professionalism.
