The classic medical textbook tends to be overly technical, excessively detailed, profusely referenced, and the antithesis of enjoyable reading. With the expectation of many hours of hard work, I was unprepared for the pleasure that lay ahead. This book is what we in the United States call a « sleeper ». Without pomp or solemnity it captures you with a light-hearted style that subtly belies its sophistication. The authors have indeed mastered the art of simplicity, combining profound knowledge with an airy format, to a degree that is hard to emulate. All the salient features of pacing are presented here, from history and pathology to complications and long-range follow-up. Perhaps it is a mark of excellence, rather than a confession of my personal ignorance, to say that there is scarcely a section that did not provide me with a new bit of information or a new insight. Permanent pacing of the heart is so common nowadays, at least in the more affluent sections of the world, that almost every person must know of someone with an implanted pacemaker. In the United States, where there are more than 100,000 new implants each year, almost every sizeable hospital has a pacemaker implantation service and almost every physician in a related

field is interested in doing this surgery. All that should really be required is that the surgeon make himself an expert. Historically, teachers have exercised considerable autonomy in the day-to-day learning that occurs in their classrooms. Now, it is growing increasingly rare for a teacher to experience this type of professional freedom. In response to high-stakes testing, national and state academic content standards, and most recently the common core standards, pacing guides are one of the more recent devices schools are using to implement and monitor curriculum. The purpose of this research project is to investigate teacher opinion toward these pacing guides. An online survey called the Pacing Guide Survey was delivered to secondary regular and special education teachers in core subject areas of mathematics, science, social studies, and language arts. The teachers were asked about whether or not they use pacing guides, their attitude and comfort level in using pacing guides, as well as: Information concerning the population of their high school, such as demographics, enrollment, and single or multiple high schools; Building level factors, such as professional development initiatives, methods of curriculum monitoring, and pacing guide

development and revisions processes; teacher factors, such as years teaching, years using pacing guides, confidence in content area, and educational background. Administrators were also interviewed to form a complete picture of pacing guide development and implementation in the secondary education environment. Quantitative data were analyzed using bivariate Spearman's rank order correlation and qualitative data were analyzed using a combination of thematic data analysis and quasi-statistical methods.

Recommendations based on the data collected are: Teachers should be provided with the flexibility to address student needs in the classroom. Teacher input into pacing guide development, implementation, and revision process is necessary to ensure that student needs are addressed. Team autonomy is key and teacher teams need to be provided with the necessary support structure to provide meaningful learning experiences for their students. As our population ages and multiple factors contribute to an increased prevalence of cardiovascular disease, more patients than ever before will be candidates for implantable devices as part of their treatment for heart rhythm abnormalities. Electrophysiologists have a

widening array of sophisticated devices from which to choose, and important new data about efficacy, long-term outcomes and possible complications has emerged, impacting how devices are chosen and utilized. Overall, the management of patients with pacemakers and ICDs and other devices remains a complex topic and the need for clear-headed, expert guidance has never been greater. Now in its 3rd edition, *Cardiac Pacing, Defibrillation and Resynchronization: A Clinical Approach* is a clinically focused guide to Pacing and ICDs that caregivers can rely on for answers to common but challenging questions on all aspects of device preparation, from selection and programming to proper implantation and long-term patient management. This new edition of *Cardiac Pacing, Defibrillation and Resynchronization: A Clinical Approach*:

- Provides answers to the most common clinical questions
- Presents a logical progression from descriptions of devices and indications to hardware selection and proper implementation
- Includes important updates in all covered areas, especially in chapters on CRT and ICD therapies, where significant advances have been made recently
- Features over 750 illustrations, most in full color
