**WESOA2007:ThirdInternationalWorkshoponEngineeringService-Oriented Applications: Analysis, Design and Composition** These workshops offered interesting presentations and discussions on a wide range of hot topics in service-oriented computing: development of mashups, management of non-functional properties and service level agreements, engineering approaches, and semantic methodologies. Also, the crucial application domain of telecom services and service architectures was investigated. The five workshops were selected out of eight submissions. During the selection process we encouraged the merging of workshop proposals with similar scope. We are grateful to all workshop organizers. Without their valuable ideas and support the workshop sessions at ICSOC as well as this volume would not have been possible. We also thank all authors for their active participation in the events, for the quality of their papers, and for being patient with us during the long process of compilation of this volume.
