A revolutionary new understanding of the precarious modern human-nature relationship and a path to a healthier, more sustainable world. Amidst all the wondrous luxuries of the modern world—smartphones, fast intercontinental travel, Internet movies, fully stocked refrigerators—lies an unnerving fact that may be even more disturbing than all the environmental and social costs of our lifestyles. The fragmentations of our modern lives, our disconnections from nature and from the consequences of our actions, make it difficult to follow our own values and ethics, so we can no longer be truly ethical beings. When we buy a computer or a hamburger, our impacts ripple across the globe, and, dissociated from them, we can't quite respond. Our personal and professional choices result in damages ranging from radioactive landscapes to disappearing rainforests, but we can't quite see how. Environmental scholar Kenneth Worthy traces the broken pathways between consumers and clean-room worker illnesses, superfund sites in Silicon Valley, and massively contaminated landscapes in rural Asian villages. His groundbreaking, psychologically based explanation confirms that our disconnections make us more destructive and that we must bear witness to nature and our consequences. Invisible Nature shows the way forward: how we can create more involvement in our own food production, more education about how goods are produced and waste is disposed, more direct and deliberative democracy, and greater contact with the nature that sustains us. This title examines the structure, scale and complexity of economic systems in the pre-Hispanic Americas, with a focus on the central highlands of Mexico, the Maya Lowlands and the central Andes. Economics is a science that can contribute substantial powerful and fresh insights! This book collects essays by leading academics that evaluate the scholarly importance of contemporary economic ideas and concepts, thus providing valuable knowledge about the present state of economics and its progress. This compilation of short essays helps readers interested in economics to identify 21st century economic ideas that should be read and remembered. The authors state their personal opinion on what matters most in contemporary economics and reveal its fascinating and creative sides. The first discussion of Aztec economy to include cross-cultural comparisons with other ancient and premodern societies around the world. In *Daily Life of the Aztecs*, Frances Berdan and Michael E. Smith offer a view into the lives of real people, doing very human things, in the unique cultural world of Aztec central Mexico. The first section focuses on people from an array of social classes - the emperor, a priest, a feather worker, a merchant, a farmer, and a slave - who interacted in the economic, social and religious realms of the Aztec world. In the second section, the authors examine four important life events where the lives of these and others intersected: the birth and naming of a child, market day, a day at court, and a battle. Through the microscopic views of individual types of lives, and interweaving of those lives into the broader Aztec world, Berdan and Smith recreate everyday life in the final years of the Aztec Empire. In this book we argue that as a first step it is important to recognize these group dynamics and the problems they cause. Some of them can be minimized through, for example, properly designed decision processes. Others are more complicated. But all of them need to be recognized and understood so that we can properly shape our expectations of the degree and quality of oversight corporate boards of directors can provide, and so that we can turn our energy toward the many group level factors that could improve board performance going forward. What part does customer and employee satisfaction play in overall business success? Management Accountants developing business models must consider this question, especially if they are taking the popular "balanced scorecard" or "strategy mapping" approaches to performance measurement. When doing so, stating cause-and-effect relationships between measurable factors like satisfaction and profitability is common practice. However, few companies test their own hypotheses. If the links are incorrect, these models can actually guide the firm down a path to failure. This report reveals the findings of state-of-the-art interventionist research on a major US homebuilder. The core claims of this company's business model were positive effects in the future due to improvements in customer and employee satisfaction. Tests were made on the validity of these claims to discover how much we can rely on these factors to improve performance. This report also examines how effective various measurement alternatives are through analysis of data compiled by different consulting companies. The results reveal that the links between satisfaction and performance is less strong and more complex than the company had assumed: these measures cannot be relied upon to guarantee increased performance. Managers must have a sophisticated understanding of performance measurement systems and to test their strategy maps empirically, rather than relying on their intuitions. This report demonstrates how you can achieve both.

* State-of-the-art interventionist research: new method in which researchers interact with the subject of the research, monitoring the effects of their input * Helps managers protect their businesses from bad business models through sophisticated understanding of likely causes of success * Shows managers how to analyse data in balanced scorecards and strategy maps to draw reliable conclusions to make the best decisions for their business

Can there be reliable information that is also relevant to decision making? Information for Efficient Decision Making: Big Data, Blockchain and Relevance focuses on the consolidation of information to facilitate making decisions in firms, in order to make their operations efficient to reduce their costs and consequently, increase their profitability. The advent of blockchain has generated great interest as an alternative to centralized organizations, where the data is gathered through a centralized ledger keeping of activities of the firm. The decentralized ledger keeping is one of the main features of blockchain that has given rise to many issues of technology, development, implementation, privacy, acceptance, evaluation and so on. Blockchain concept is a follow-up to big data environment facilitated by enormous progress in computer hardware, storage capacities and technological prowess. This has resulted in the rapid acquiring of data not considered possible earlier. With shrewd modeling analytics and algorithms, the applications have grown to significant levels. This handbook discusses the progress in data collection, pros and cons of collecting information on decentralized publicly available ledgers and several applications. ACCOUNTING: Text and Cases, 10/E is a 28 chapter book. Chapters 1-14 cover financial accounting, while Chapters 15-21 cover management accounting, and Chapters 22-28 focus on broader issues of control and corporate strategy. The approximately 120 cases that largely make up the end-of-chapter material are a combination of classic Harvard style cases, as well as extended problems. New to this edition is the inclusion of 2-3 problems per chapter. These problems, while not as involved as the case material, allow the students to exercise the concepts demonstrated in each chapter. The goal of the problem material is to provide a transition to the case material, which is a response to customer requests. Maurice Duke and Daniel P. Jordan vividly describe the colorful life and times of one of the South's—and America's—most important businesses and provide insight into how luck, management practices, and personalities helped the company rise to international prominence. Universal Leaf Tobacco Company, the world's largest independent leaf tobacco dealer, is one of the major buying arms for tobacco manufacturers worldwide, selecting, purchasing, processing, and storing leaf tobacco. The story opens during the aftermath of the Civil War when Southerners realized once again the worldwide potential of their native crop. The authors follow the company from its incorporation 1918 through one of the first hostile takeover attempts in American business, to its evolution in 1993 into Universal Corporation, a worldwide conglomerate with a number of products including tobacco. Based on

scholarly research and over two hundred interviews with past and present Universal employees, this objective saga reveals much about American business and economic history. We analyze effects of performance measure properties (controllable and uncontrollable risk, distortion, and manipulation) on incentive plan design, using data from auto dealership manager incentive systems. Dealerships put the most weight on measures that are "better" with respect to these properties. Additional measures are more likely to be used for a second or third bonus if they can mitigate distortion or manipulation in the first performance measure. Implicit incentives are used to provide ex post evaluation, to motivate the employee to use controllable risk on behalf of the firm, and to deter manipulation of performance measures. Overall, our results indicate that firms use incentive systems of multiple performance measures, incentive instruments, and implicit evaluation and rewards as a response to weaknesses in available performance measures.

This is the 11th Volume in the series Memorial Tributes compiled by the National Academy of Engineering as a personal remembrance of the lives and outstanding achievements of its members and foreign associates. These volumes are intended to stand as an enduring record of the many contributions of engineers and engineering to the benefit of humankind. In most cases, the authors of the tributes are contemporaries or colleagues who had personal knowledge of the interests and the engineering accomplishments of the deceased. Through its members and foreign associates, the Academy carries out the responsibilities for which it was established in 1964. Under the charter of the National Academy of Sciences, the National Academy of Engineering was formed as a parallel organization of outstanding engineers. Members are elected on the basis of significant contributions to engineering theory and practice and to the literature of engineering or on the basis of demonstrated unusual accomplishments in the pioneering of new and developing fields of technology. The National Academies share a responsibility to advise the federal government on matters of science and technology. The expertise and credibility that the National Academy of Engineering brings to that task stem directly from the abilities, interests, and achievements of our members and foreign associates, our colleagues and friends, whose special gifts we remember in this book.
