Atlas of the Diabetic Foot Jan 14 2022 Foot ulcers occur in approximately 15% of the patients with diabetes mellitus in their lifetime, with a major impact on their quality of life. Many hospital admissions related to diabetes are due to foot ulcers, which can result in prolonged hospital stay and increased morbidity and mortality. The majority of lower limb amputations are performed in patients with diabetes every year (80,000 at least in the USA). Most of the diabetes-related foot problems can be prevented or their severity reduced by early detection and treatment. This book contributes to improved foot care through raised awareness of prevention, clinical manifestations, diagnosis and management among healthcare professionals. This comprehensive atlas, now in a second edition, provides: 520 colour photographs, graphs, tables and imaging studies Educational examples taken from genuine case reports A reference guide for identifying patients at risk for foot problems Illustration of common problems such as neuropathic and neuroischaemic ulcers, ischaemia and infection Introduction to new technologies and bioengineered materials used for the treatment of foot ulcers This book will be of interest to diabetologists, endocrinologists, podiatrists, specialist nurses, general practitioners, surgeons and clinical researchers.

A Clinical Atlas Feb 21 2020 Excerpt from A Clinical Atlas: Variations of the Bones of the Hands and Feet For many years I have devoted myself to the study of variations in man, especially to those of the spine and of the bones of the hand and foot. The importance of these in the practice of surgery becomes clearer day by day. This Atlas has been prepared for the use of the practitioner. Some variations are discussed which are of interest to the orthopaedist, but attention has been given chiefly to those which may be expected to appear in skiagraphs taken after an injury and which may suggest a fracture to the unwary. Atlas Foot and Ankle Surgery, Second Edition Mar 28 2023 The second edition of An Atlas of Foot and Ankle Surgery builds on the success of the first, with an international selection of expert contributors to represent the current practice of foot and ankle surgery throughout the world. The material in this atlas is

presented according to how foot and ankle pathology is encountered by most orthopaedic surgeons in their practice. Some chapters deal with individual common procedures, such as the soft tissue procedure for hallux valgus: in these, technical details and variations of technique are presented. Other chapters deal with diagnoses, such as metatarsalgia or cavus foot, and a number of different surgical treatment options

are described. The scope of each chapter exceeds surgical instructions alone: the respective pathology is detailed, as are diagnostic techniques and alternative methods of treatment. The Atlas of Foot and Ankle Surgery should be of interest not only to inexperienced specialist surgeons, but also to the general orthopaedists and surgeon in training with an interest in disorders of the foot and ankle.
