In the middle and late 1960s, when it was clear that neuroendocrinology was established as a discipline in its own right, it occurred to us that auto biographical accounts of the pioneer work in this field by the major participants would provide a highly interesting and informative account of his tory in the making. With the death of G. W. Harris in late 1971, and the loss thereby of an outstanding pioneer and personality in neuroendocri nology, it appeared to us to be even more urgent to undertake such a venture and collect as many stories as possible. The three of us agreed that initially we would limit our invitations to the senior investigators whose re search careers lay mostly behind them, with the hope that if this venture proved successful, we could ask younger and still very active researchers in neuroendocrinology to

contribute to a subsequent volume. Most of those invited to write for this book agreed to do so, but regrettably there remain some notable absentees. The authors were requested to write a personal, and even idiosyncratic, account of the steps taken, and the motivation and drive that led them to develop their interest in the relationship between the brain and the endocrine system.

We use them to communicate, research, process, record, and for entertainment. They influence the way we interact in the world, the way we live. Digital technologies also offer the potential to transform the nature of the learning process in mathematics. The learning environment, the types of tasks learners can engage with, and the nature of that engagement differs from working in other environments. The Internet, for instance, presents greater scope for child-centered, inquiry-based learning. Dynamic geometry software and GoogleEarth offer interactive ways of exploring shape, position and space that is not possible with the pencil-and-paper medium. This book provides insights into how mathematical understanding emerged for primary-aged children (5-13 years) when they investigated mathematical tasks through digital media. It considers learning theories that are frequently used in mathematics education, and situates a

contemporary interpretive approach within those perspectives. A key purpose was to provide some practical tasks for teachers/teacher educators to incorporate digital technologies into their mathematics programmes, tasks that have been used successfully for learning. Leadership, Capacity Building and School Improvement provides a fresh and original perspective on the most important issues confronting today's practitioners and academics in the field of educational leadership. New and exciting concepts are introduced such as the research-engaged school of the future. While its theoretical and evidence-based approach raises to a robust level the discussion on the most important leadership challenges of the day, the book is at the same time intensely practical in addressing everyday issues faced by contemporary policy makers and school practitioners.

Underpinning the eleven chapters is a conceptual framework founded on the notion of leadership as capacity building, giving the book a coherence that many others on school leadership lack. Among the themes actively discussed are: Conceptualising and Contextualising Leadership – what is leadership? What distinguishes good from mediocre and poor leaders? What are the

traits, dispositions and attributes that make for good leadership? How does context influence leadership? How appealing is leadership as a career? What are the components of capacity building leadership? Contemporary Leadership Themes – what is learning-centred leadership and how can it best promote good teaching and student learning? How can leaders distribute leadership across the school, and what are the pitfalls? How can leaders capitalise on the notion of the school as a professional learning community? How can leaders best be nurtured and developed? Policy, Leadership Practice and Impact – what new forms of leadership are presaged by the specialist schools policy as a means of school improvement? How can schools combine a focus on academic achievement with the need to prepare students for the changing twenty-first century workplace? Leadership, Capacity Building and School Improvement provides an up-to-date authoritative, critical and insightful account of school leadership. It combines advocacy and argument with evidence-based practice drawn from the most plausible and robust sources. This book will prove a valuable tool for those taking higher degrees in school leadership and management: school leaders on NPQH courses and school practitioners as a whole interested in interfacing with the latest empirical evidence and ideas, as well as academics teaching and researching in the area of educational leadership. Since the book adopts an international perspective, drawing its examples and evidence from both the Anglo-American and the Asian contexts, it will be found relevant to academics, policy makers and practitioners across these regions. Clive Dimmock is Visiting Professor at the National Institute of Education in Singapore and Professor Emeritus at the University of Leicester, UK. Kenneth Waltz's 1979 Theory of International Politics is credited with bringing about a "scientific revolution" in the study of international relations – bringing the field into a new era of

systematic study. The book is also a lesson in reasoning carefully and critically. Good reasoning is exemplified by arguments that move systematically, through carefully organised stages, taking into account opposing stances and ideas as they move towards a logical conclusion. Theory of International Politics might be a textbook example of how to go about structuring an argument in this way to produce a watertight case for a particular point of view. Waltz's book begins by testing and critiquing earlier theories of international relations, showing their strengths and weaknesses, before moving on to argue for his own stance – what has since become known as “neorealism”. His aim was “to construct a theory of international politics that remedies the defects of present theories.” And this is precisely what he did; by showing the shortcomings of the prevalent theories of international relations, Waltz was then able to import insights from sociology to create a more comprehensive and realistic theory that took full account of the strengths of old schemas while also remedying their weaknesses – reasoning out a new theory in the process.

Conducting Meta-Analysis Using SAS reviews the meta-analysis statistical procedure and shows the reader how to conduct one using SAS. It presents and illustrates the use of the PROC MEANS procedure in SAS to perform the data computations called for by the two most commonly used meta-analytic procedures, the Hunter & Schmidt and Glassian approaches. This book serves as both an operational guide and user's manual by describing and explaining the meta-analysis procedures and then presenting the appropriate SAS

program code for computing the pertinent statistics. The practical, step-by-step instructions quickly prepare the reader to conduct a meta-analysis. Sample programs available on the Web further aid the reader in understanding the material. Intended for researchers, students, instructors, and practitioners interested in conducting a meta-analysis, the presentation of both formulas and their associated SAS program code keeps the reader and user in touch with technical aspects of the meta-analysis process. The book is also appropriate for advanced courses in meta-analysis psychology, education, management, and other applied social and health sciences departments. Econometrics Informing Natural Resources Management will be welcomed by academics and researchers interested in the areas of natural resource economics and econometrics, and also applied econometrics. While there are books that address the integration of technology into teaching curricula, very few address the process for teacher education faculty and the systemic reform of a teacher education program. It will help in the effort to motivate faculty to make utilizing new technology a natural strategy for the teachers they are educating. In his latest book, *New Frontiers in Science and Technology Studies* he charts the debates likely to be of relevance in the coming years. Should science and technology be treated as separate entities? What impact has globalization had on science and technology? Can science be clearly distinguished

from other forms of knowledge? Does the politicization of science really matter? Is there a role for the social regulation of scientific inquiry? Should we be worried about research fraud? These questions are explored by examining an array of historical, philosophical and contemporary sources. Attention is paid, for example, to the Bruno Latour's *The Politics of Nature* as a model for science policy, as well as the global controversy surrounding Bjorn Lomborg's *The Sceptical Environmentalist*, which led to the dismantling and re-establishment of the Danish national research ethics board. *New Frontiers in Science and Technology Studies* will appeal strongly to scholars and advanced undergraduate and graduate students in courses concerned with the social dimensions of science and technology, and anyone who cares about the future of science. *Understanding and Addressing Adolescent Grief Issues* will help you, as the caring adult, be a guide through this troubling time by helping you understand what the adolescent is going through and giving you comprehensive techniques to address the situation. Once upon a time, a nobody met a prince. Then she met his best friend, a second prince. Then she learned they like to share, and that's when things got interesting. That's when things got downright scandalous. My life has never been a fairytale. Absent parents, a grandmother gone too soon, and a job working the kitchens for the most heinous b**ch in the Kingdom of Bandiff. But that's before I sneak into the hottest royal ball on the planet. That's before I waltz right into them. The McDermott Princes. Princes, plural. There's two of them - both gorgeous beyond belief, alpha as hell, and more tempting than sin. Both with their eyes on me and both with that look that says that I'm theirs. Two princes, one baker. This might sound like too many cooks in the kitchen, but they say they like to share. They say they'll tear their whole kingdom down to make me theirs. They say they want to make me their Queen. Pretty soon, breaking into a

royal ball is the least of my problems. This is a disaster waiting to happen. It's filthy, and oh-so-wrong. It's a royal scandal of epic proportions, and I'm right in the middle of it...I'm right in the middle of them. Maybe this is a fairytale after all. Ever heard of the cook who found a crown? How about two crowns? Two big, dominant, mouthwatering, pulse-quickening crowns. I've never found a happy ever after. Now, I think I'm about to find two of them. This is a standalone story. The books in the Royally Screwed series can be read in any order. Steamy as all get-out, ridiculously over the top, and more growly alpha yumminess than you can shake a tiara at. The book delineates the technical and theoretical aspects of the subject without getting in too deep. It leads readers through the subtleties of vacuum technology without using a dissertation on mathematics to get them there. An interesting blend of easy-to-understand technician-level information combined with engineering data and formulae, the book provides a non-analytical introduction to high vacuum technology.
