Two leaders of the National Park Service provide a front-row seat to the disastrous impact of partisan politics over the past fifty years—and offer a bold vision for the parks' future. The US National Parks, what environmentalist and historian Wallace Stegner called America's "best idea," are under siege. Since 1972, partisan political appointees in the Department of the Interior have offered two conflicting views of the National Park Service (NPS): one vision emphasizes preservation and science-based decision-making, and another prioritizes economic benefits and privatization. These politically driven shifts represent a pernicious, existential threat to the very future of our parks. For the past fifty years, brothers Jonathan B. and T. Destry Jarvis have worked both within and outside NPS as leaders and advocates. National Parks Forever interweaves their two voices to show how our parks must be protected from those who would open them to economic exploitation, while still allowing generations to explore and learn in them. Their history also details how Congress and administration appointees have used budget and staffing cuts to sabotage NPS's ability to manage the parks and even threatened their existence. Drawing on their experience, Jarvis and Jarvis make a bold and compelling proposal: that it is time for NPS to be removed from the Department of the Interior and made an independent agency, similar to the Smithsonian Institution, giving NPS leaders the ability to manage park resources and plan our parks' protection, priorities, and future. Historians of wilderness have shown that nature reserves are used ideologically in the construction of American national identity. But the contemporary problem of wilderness demands examination of how profoundly nature-in-reserve influences something more fundamental, namely what counts as being well, having a life, and having a future. What is wellness for the citizens to whom the parks are said to democratically belong? And how does the presence of foreigners threaten this wellness? Recent critiques of the Wilderness Act focus exclusively on its ecological effects, ignoring the extent to which wilderness policy affects our contemporary collective experience and political imagination. Tracing the challenges that migration and indigenusness currently pose to the national park system and the Wilderness Act, Grebowicz foregrounds concerns with social justice against the ecological and aesthetic ones that have created and continue to shape these environments. With photographs by Jacqueline Schlossman. The companion volume to the twelve-hour PBS series from the acclaimed filmmaker behind *The Civil War*, *Baseball*, and *The War*. America's national parks spring from an idea as radical as the Declaration of Independence: that the nation's most magnificent and sacred places should be preserved, not for royalty or the rich, but for everyone. In this evocative and lavishly illustrated narrative, Ken Burns and Dayton Duncan delve into the history of the park idea, from the first sighting by white men in 1851 of the valley that would become Yosemite and the creation of the world's first national park at Yellowstone in 1872, through the most recent additions to a system that now encompasses nearly four hundred sites and 84 million acres. The authors recount the adventures, mythmaking, and intense political battles behind the evolution of the park system, and the enduring ideals that fostered its growth. They capture the importance and splendors of the individual parks: from Haleakala in Hawaii to Acadia in Maine, from Denali in

Alaska to the Everglades in Florida, from Glacier in Montana to Big Bend in Texas. And they introduce us to a diverse cast of compelling characters—both unsung heroes and famous figures such as John Muir, Theodore Roosevelt, and Ansel Adams—who have been transformed by these special places and committed themselves to saving them from destruction so that the rest of us could be transformed as well. The National Parks is a glorious celebration of an essential expression of American democracy. Statement of responsibility taken from cover. “If you cut down the goldenrod, the wild black cherry, the milkweed and other natives, you eliminate the larvae, and starve the birds. This simple revelation about the food web—and it is an intricate web, not a chain—is the driving force in Bringing Nature Home.” —The New York Times As development and subsequent habitat destruction accelerate, there are increasing pressures on wildlife populations. But there is an important and simple step toward reversing this alarming trend: Everyone with access to a patch of earth can make a significant contribution toward sustaining biodiversity. There is an unbreakable link between native plant species and native wildlife—native insects cannot, or will not, eat alien plants. When native plants disappear, the insects disappear, impoverishing the food source for birds and other animals. In many parts of the world, habitat destruction has been so extensive that local wildlife is in crisis and may be headed toward extinction. Bringing Nature Home has sparked a national conversation about the link between healthy local ecosystems and human well-being, and the new paperback edition—with an expanded resource section and updated photos—will help broaden the movement. Little Michael is terrified of wild animals, particularly bears and mountain lions. His sister Emily enjoys tormenting her little brother. Wildlife can be elusive, and both are disappointed when, at first, they don't encounter many animals in the park. The kids quickly learn, however, that there are animals all around, and these creatures leave behind scat and tracks. Before long, the kids are able to recognize bat guano, distinguish deer scat from other kinds of scat, and determine what an owl has dined on recently. Fun animal facts are offered in ?The Straight Poop? fact boxes. Colorful illustrations of animals and their scat and tracks supplement this lively tale, and a quick-reference chart at the back makes field identification a breeze! A design history of national parks that places landscape architecture within a larger historical context The epic saga of Big Basin began in the late 1800s, when the surrounding communities saw their once "inexhaustible" redwood forests vanishing. Expanding railways demanded timber as they crisscrossed the nation, but the more redwoods that fell to the woodman's axe, the greater the effects on the local climate. California's groundbreaking environmental movement attracted individuals from every walk of life. From the adopted son of a robber baron to a bohemian woman winemaker to a Jesuit priest, resilient campaigners produced an unparalleled model of citizen action. Join author Traci Bliss as she reveals the untold story of a herculean effort to preserve the ancient redwoods for future generations. "Most guides to animals in parks are intended primarily as identification aids and include relatively little on the biology of the species. Many national parks and monuments tell unique stories of the struggle between the rights of native peoples and the wants of the dominant society. These stories involve our greatest parks—Yosemite, Yellowstone, Mesa Verde, Glacier, the Grand Canyon, Olympic, Everglades—as well as less celebrated parks elsewhere. In *American Indians and National Parks*, authors Robert Keller and Michael Turek relate these untold tales of conflict and collaboration. *American Indians and National Parks* details specific relationships between native peoples and national parks, including land claims, hunting rights, craft sales, cultural interpretation, sacred sites, disposition of cultural artifacts, entrance fees, dams, tourism promotion, water rights, and assistance to tribal parks. Beginning with a historical account of Yosemite and Yellowstone, *American Indians and National Parks* reveals how the creation of the two oldest parks affected native peoples and set a pattern for the century to follow. Keller and Turek examine the evolution of federal policies toward land preservation and explore provocative issues surrounding park/Indian relations. When has the National Park Service changed its policies and attitudes toward Indian tribes, and why? How have environmental organizations reacted when native demands, such as those of the Havasupai over land claims in the Grand Canyon, seem to threaten a national park? How has the Park Service dealt with native claims to hunting and fishing rights in Glacier, Olympic, and the Everglades? While investigating such questions, the authors traveled extensively in national parks and conducted over 200 interviews with Native Americans, environmentalists, park rangers, and politicians. They meticulously researched materials in archives and libraries, assembling a rich collection of case studies ranging from the 19th century to the present. In *American Indians and National Parks*, Keller and Turek tackle a significant and complicated subject for the first time, presenting a balanced and detailed account of the Native-American/national-park drama. This book will prove to be an invaluable resource for policymakers, conservationists, historians, park visitors, and others who are concerned about preserving both cultural and natural resources. While she studies condors in the Grand Canyon a scientist's life is threatened, and the strange, hostile, teenage computer whiz in her family's foster care might be involved. With expert content and beautiful photos provided by Backpacker magazine, this treasured collector's item belongs as much on the coffee table as does in the backpack. Released in time for the National Park Service's 100th anniversary, Backpacker The National Parks Coast to Coast is a collection of the best 100 hikes in our national parks, featuring Describes the formation of the remarkable canyons in this national park in Arizona and discusses other things to see and do there. "In this remarkable journey, Mark Woods captures the essence of our National Parks: their serenity and majesty, complexity and vitality--and their power to heal." --Ken Burns For many childhood summers, Mark Woods piled into a station wagon with his parents and two sisters and headed to America's national parks. Mark's most vivid

childhood memories are set against a backdrop of mountains, woods, and fireflies in places like Redwood, Yosemite, and Grand Canyon national parks. On the eve of turning fifty and a little burned-out, Mark decided to reconnect with the great outdoors. He'd spend a year visiting the national parks. He planned to take his mother to a park she'd not yet visited and to re-create his childhood trips with his wife and their iPad-generation daughter. But then the unthinkable happened: his mother was diagnosed with cancer and given just months to live. Mark had initially intended to write a book about the future of the national parks, but *Lassoing the Sun* grew into something more: a book about family, the parks, and the legacies we inherit and the ones we leave behind. From Acadia and Great Smoky Mountains to Zion and Mount Rainier, millions of visitors tour America's national parks. While park roads determine what most visitors see and how they see it, however, few pause to consider when, why, or how the roads they travel on were built. This illustrated book highlights the qualities of park roads, details the factors influencing their design and development, and examines their role in shaping the national park experience--from the Blue Ridge Parkway and Skyline Drive to Glacier National Park's Going-to-the-Sun Road, Yellowstone's Grand Loop, Yosemite's Tioga Road, and scores of other scenic drives. A never-before-seen collection of United States National Park Service maps This book brings together a collection of over 400 maps produced by the United States National Park Service from 1910 to today. Photographer Brian Kelley has impulsively archived the rarely seen treasures over the past three years, uncovering a design portfolio with little to no credit to their respective designers. The growing collection displays a progressive design approach, from more typographic-driven covers, to the proliferation of duotone print production, culminating in the Unigrad system developed by Italian designer Massimo Vignelli in the 1970s.
