This document is designed to help practitioners and policymakers in the European

Union's member states coordinate their initial and continuing vocational education and training (VET) programs. It presents a subclassification of the recently revised International Standard Classification of Education (ISCED) that encompasses all fields of VET. The document begins with an overview of the fields of education in the ISCED, which was developed by the United Nations Educational, Scientific and Cultural Organization to serve as a tool for assembling, compiling, and presenting national and international educational statistics. The creation of a third digit to permit classification of VET within the ISCED system is explained along with the subject content approach underpinning the ISCED. Presented next are a table detailing the 9 broad fields, 25 fields of education, and (approximately) 65 fields of training in the ISCED system and instructions for using the manual. The actual field descriptions are listed next. Descriptions of the each of the 25 fields of VET are described next. Each description includes the following: field name; field audience; types of programs offered at various levels; and specific types of training included in/excluded from the field. Concluding the document are alphabetic and systematic code lists. (MN) This is a practical guide on how to get the best deal for online subscriptions. The Manual of Biocorrosion explains the microbiology, electrochemistry, and surface phenomena involved in biocorrosion and biofouling processes. Written primarily for non-specialists, the information in this manual is practical and offers a comprehensive look at the three components of biocorrosion: the microorganisms, the metal, and the aqueous environment. It also addresses methods for the monitoring, prevention, and control of biocorrosion. The first part of the book covers the fundamental aspects of microbiology, electrochemistry, and biofouling of metal surfaces. The second half describes biocorrosion assessment in the laboratory and the field, the main control and mitigation procedures used, practical case studies, and laboratory methods and formulations. The Manual of Biocorrosion is the book the industrial sector (water treatment plants, oil refineries, etc.) has been waiting for, providing the basics for implementing prevention, control, and mitigation procedures. In addition, it covers the latest industry trends with discussions of biocide selection, strategies for treating biocorrosion without harming the environment, and the latest monitoring programs. The academic sector will benefit as well from the up-to-date information on mechanisms and recent advances in all biocorrosion aspects and technology. Research trends such as the application of surface analysis techniques and modern electron microscopy, the use of conventional and innovative electrochemical techniques for assessment, and microbial inhibition of corrosion are all considered. Features 100 illustrations provide you with a visual understanding of the problems and techniques discussed 30 tables give you quick access to data 46 suggested readings provide references on books, conference and workshop proceedings, and special issues

The Haidao composed in A.D. 263 by Liu Hui, established the mathematical procedures for much of East Asian surveying activity for the next one thousand years. The contents of the Haidao also testify to the ability of the Chinese to systematize mathematics and hint at the use of proof in Chinese mathematics, a concept usually associated with Greek mathematical thought. Frank Swetz provides an annotated translation of the Haidao and an analysis of its surveying problems. In particular, he details surveying techniques and undertakes a mathematical exposition of the Chinese chong cha solution procedures. The Haidao is a testimony to the ingenuity and skill of China's early surveyors and its author, Liu Hui. This study complements and extends the findings of Swetz's previous book, Was Pythagoras Chinese? An Examination of Right Triangle Theory in Ancient China. Confronted with their first class in media law, many juniors, seniors, and even beginning graduate students may be at a loss. With little or no experience working with legal materials such as the statutes, cases, and regulations, the language and organizing principles of this specialized body of material can be confusing. The Handbook for Research in Media Law is a practical manual designed to help newcomers to media law overcome the obstacles they may encounter in working with legal materials. Students will find this book especially useful as they develop basic research plans to complete term papers or other class projects typically assigned by professors in media law courses. Designed as a "how to" primer based largely on LexisNexis Academic, this supplemental text simplifies the process by providing step-by-step procedures for conducting legal research. The book helps students locate and analyze the sources of law, both secondary and primary. This includes federal and state examples such as case opinions, statutes and regulations in terms of significant media law topics. Plus, students learn the process of accessing this information using web-based resources—efficiently and thoroughly. The Handbook for Research in Media Law is arranged in terms of strategies so that students can conduct legal research in such topics as copyright, libel, invasion of privacy, and more. The techniques covered include locating the law, using correct citation style, analyzing and briefing primary law, and updating or "Shepardizing" the law. By providing easy-to-follow instructions, the text encourages students to work independently. Students will learn to identify both secondary and primary law relating to media law topics, and to demonstrate an understanding of their organization and significance. Sparing students many of the frustrations they typically encounter when doing legal research for the first time, the Handbook for Research in Media Law shows students how to make the most of select legal resources now available to them electronically. Emphasizing that diversity in the curriculum is as much about a way of thinking as it is about specific information, Lutzker presents a compendium of innovative and practical classroom strategies and widely available information resources which will enable faculty to increase the multicultural content of their courses without necessarily making major changes in their accustomed methods of teaching. This is a handbook for college faculty in all disciplines who would like to increase the multicultural content of their courses, but have been reluctant to do so for a variety of reasons including an already overloaded syllabus, a lack of background in the subject, uncertainty about student reactions, or lack of time to make substantial changes in an existing syllabus. Administrators anxious to increase diversity in the curriculum of their institutions, but unable to fund large-scale curriculum revision projects, will also find this volume useful. Part I is concerned with classroom strategies and with student research projects. Starting with discussions of objectives and priorities, the underlying role of critical thinking, and the importance of language sensitivity, the book then describes specific classroom strategies useful for increasing diversity. The subsequent chapters are devoted to discussions of general guidelines for developing student projects with a multicultural perspective, innovative alternatives to the traditional term paper, and suggestions for multicultural student projects which do not require library research. Part I concludes with a discussion of possible student reactions to increased multiculturalism, and suggested approaches to those reactions. Part II is concerned with information resources which will be useful to instructors and to students. Fully annotated lists are provided in a variety of areas including widely available primary sources, specialized biographical directories, sources for sample syllabi in all disciplines, guides to ethnic and foreign press, to films and videos, and to electronic resources. Part II concludes with a discussion designed to increase efficiency in using the library catalog to locate information in multicultural subject areas. Appendices provide sample research worksheets, a list of small publishers and distributors of multicultural books, and an annotated bibliography. Precise guides for learning to sing in French, German, Hebrew, Italian, Russian, Spanish, and Roman Church Latin. No foreign language experience necessary. The essential study partner includes additional practice of grammar, vocabulary, and writing, as well as listening comprehension with simulated conversations and pronunciation practice.
