**Secrets of the Baby Whisperer** Nov 28 2020 "TRACY HOGG HAS GIVEN PARENTS A GREAT GIFT—the ability to develop early insight into their child's temperament." —Los Angeles Family When Tracy Hogg's Secrets of the Baby Whisperer was first published, it soared onto bestseller lists across the country. Parents everywhere became "whisperers" to their newborns, amazed that they could actually communicate with their baby within weeks of their child's birth. Tracy gave parents what for some amounted to a miracle: the ability to understand their baby's every coo and cry so that they could tell immediately if the baby was hungry, tired, in real distress, or just in need of a little TLC. Tracy also dispelled the insidious myth that parents must go sleepless for the first year of a baby's life—because a happy baby sleeps through the night. Now you too can benefit from Tracy's more than twenty years' experience. In this groundbreaking book, she shares simple, accessible programs in which you will learn: • E.A.S.Y.—how to get baby to eat, play, and sleep on a schedule that will make every member of the household's life easier and happier. • S.L.O.W.—how to interpret what your baby is trying to tell you (so you don't try to feed him when he really wants a nap). • How to identify which type of baby yours is—Angel, Textbook, Touchy, Spirited, or Grumpy—and then learn the best way to interact with that type. • Tracy's Three Day Magic—how to change any and all bad habits (yours and the baby's) in just three days. At the heart of Tracy's simple but profound message: treat the baby as you would like to be treated yourself. Reassuring, down-to-earth, and often flying in the face of conventional wisdom, Secrets of the Baby Whisperer promises parents not only a healthier, happier baby but a more relaxed and happy household as well.

**How Babies Sleep** Feb 18 2020 Discover the best baby sleep method—gentle, science-backed, and inspired by the latest Nobel Prize-winning research—that shows you how to get your baby to sleep through the night naturally. Sleep—or the lack of it—is one of the most crucial issues for new parents. Newborn babies typically wake every two to three hours, and there's nothing bleary-eyed, exhausted parents want more than a night of uninterrupted sleep. But while there's plenty of advice out there, there is nothing that's based on the latest cutting-edge research about sleep—until now. In How Babies Sleep, Sofia Axelrod, PhD—neuroscientist, sleep consultant, and mother of two—introduces the first baby sleep method that is truly rooted in the science of sleep. After having her first child, Axelrod realized that the typical baby sleep advice conflicted with the actual science of sleep, including the findings from her mentor's Nobel Prize-winning sleep lab. She developed her transformative method based on the latest discoveries about our body's circadian clock and how it is disturbed by light and other external stimuli. After seeing incredible results with her own babies, she has since counseled countless families in her groundbreaking method—which works with babies' needs and helps little ones learn to self-soothe, fall asleep more easily, and stay asleep through the night. You'll discover helpful tips that work, and learn: why using a red lightbulb (instead of a regular one) in the nursery at night can minimize wakings; why the age-old advice "don't wake a sleeping baby" isn't true; how to create a healthy routine; how to sleep train gently with minimal crying (under two minutes); and so much more in this revolutionary and effective book that

will help both you and your baby enjoy a peaceful night's sleep.

**Our Babies, Ourselves** Dec 22 2022 A thought-provoking combination of practical parenting information and scientific analysis, *Our Babies, Ourselves* is the first book to explore why we raise our children the way we do--and to suggest that we reconsider our culture's traditional views on parenting. New parents are faced with innumerable decisions to make regarding the best way to care for their baby, and, naturally, they often turn for guidance to friends and family members who have already raised children. But as scientists are discovering, much of the trusted advice that has been passed down through generations needs to be carefully reexamined. In this ground-breaking book, anthropologist Meredith Small reveals her remarkable findings in the new science of ethnopediatrics. Professor Small joins pediatricians, child-development researchers, and anthropologists across the country who are studying to what extent the way we parent our infants is based on biological needs and to what extent it is based on culture--and how sometimes what is culturally dictated may not be what's best for babies. Should an infant be encouraged to sleep alone? Is breast-feeding better than bottle-feeding, or is that just a myth of the nineties? How much time should pass before a mother picks up her crying infant? And how important is it really to a baby's development to talk and sing to him or her? These are but a few of the important questions Small addresses, and the answers not only are surprising, but may even change the way we raise our children.

*The Happiest Baby on the Block* Apr 02 2021 Perfect for expecting parents who want to provide a soothing home for the newest member of their family, *The Happiest Baby on the Block*, the national bestseller by respected pediatrician and child development expert Dr. Harvey Karp, is a revolutionary method for calming a crying infant and promoting healthy sleep from day one. In perhaps the most important parenting book of the decade, Dr. Harvey Karp reveals an extraordinary treasure sought by parents for centuries --an automatic "off-switch" for their baby's crying. No wonder pediatricians across the country are praising him and thousands of Los Angeles parents, from working moms to superstars like Madonna and Pierce Brosnan, have turned to him to learn the secrets for making babies happy. Never again will parents have to stand by helpless and frazzled while their poor baby cries and cries. Dr. Karp has found there IS a remedy for colic. "I share with parents techniques known only to the most gifted baby soothers throughout history ...and I explain exactly how they work." In a innovative and thought-provoking reevaluation of early infancy, Dr. Karp blends modern science and ancient wisdom to prove that newborns are not fully ready for the world when they are born. Through his research and experience, he has developed four basic principles that are crucial for understanding babies as well as improving their sleep and soothing their senses: ·The Missing Fourth Trimester: as odd as it may sound, one of the main reasons babies cry is because they are born three months too soon. ·The Calming Reflex: the automatic reset switch to stop crying of any baby in the first few months of life. ·The 5 "S's": the simple steps (swaddling, side/stomach position, shushing, swinging and sucking) that trigger the calming reflex. For centuries, parents have tried these methods only to fail because, as with a knee reflex, the calming reflex only works when it is triggered in precisely the right way. Unlike other books that merely list these techniques Dr. Karp teaches parents exactly how to do them, to guide cranky infants to calm and easy babies to serenity in minutes...and help them sleep longer too. ·The Cuddle Cure: the perfect mix the 5 "S's" that can soothe even the most colicky of infants. In the book, Dr. Karp also explains: What is colic? Why do most babies get much more upset in the evening? How can a parent calm a baby--in mere minutes? Can babies be spoiled? When should a parent of a crying baby call the doctor? How can a parent get their baby to sleep a few hours longer? Even the most loving moms and dads sometimes feel pushed to the breaking point by their infant's persistent cries. Coming to the rescue, however, Dr. Karp places in the hands of parents, grandparents, and all childcare givers the tools they need to be able to calm their babies almost as easily as...turning off a light. From the Hardcover edition.

*Cribsheet* Jul 05 2021 From the author of *Expecting Better* and *The Family Firm*, an economist's guide to the early years of parenting. "Both refreshing and useful. With so many parenting theories driving us all a bit batty, this is the type of book that we need to help calm things down." —LA Times "The book is jampacked with information, but it's also a delightful read because Oster is such a good writer." —NPR With *Expecting Better*, award-winning economist Emily Oster spotted a need in the pregnancy market for advice that gave women the information they needed to make the best decision for their own pregnancies. By digging into the data, Oster found that much of the conventional pregnancy wisdom was wrong. In *Cribsheet*, she now tackles an even greater challenge: decision-making in the early years of parenting. As any new parent knows, there is an abundance of often-conflicting advice hurled at you from doctors, family, friends, and strangers on the internet. From the earliest days, parents get the message that they must make certain choices around feeding, sleep, and schedule or all will be lost. There's a rule—or three—for everything. But the benefits of these choices can be overstated, and the trade-offs can be profound. How do you make your own best decision? Armed with the data, Oster finds that the conventional wisdom doesn't always hold up. She debunks myths around breastfeeding (not a panacea), sleep training (not so bad!), potty training (wait until they're ready or possibly bribe with M&Ms), language acquisition (early talkers aren't necessarily geniuses), and many other topics. She also shows parents how to think through freighted questions like if and how to go back to work, how to think about toddler discipline, and how to have a relationship and parent at the same time. Economics is the science of decision-making, and *Cribsheet* is a thinking parent's guide to the chaos and frequent misinformation of the early years. Emily Oster is a trained expert—and mom of two—who can empower us to make better, less fraught decisions—and stay sane in the years before preschool.

*What Babies Say Before They Can Talk* Mar 13 2022 In *What Babies Say Before They Can Talk*, psychiatrist and psychoanalyst Paul C. Holinger, M.D., M.P.H., explains how infants communicate with us, and we with them, and outlines the nine easily identifiable signals that will help you to decode your baby's needs and feelings. Dr. Holinger decodes the nine easily identifiable signals—interest, enjoyment, surprise, distress, anger, fear, shame, disgust (a reaction to bad tastes), and dissmell (a reaction to bad smells)—that all babies use to express their needs and wants. These insights will aid parents in discerning what their baby is feeling. This book can help all parents become more confident and self-aware in their interactions with their children, create positive communication, and put the joy back into parenting. This is a unique work. It provides a foundation for understanding feelings and behavior. Based on emerging research, *What Babies Say Before They Can Talk* offers parents a new perspective on their babies' sense of the world and the people around them. The goal of this book is to help parents enhance their infants' potential, prevent problems, and raise happy, healthy, responsible children.

The human brain is arguably the most complex object in the universe. With about 100 billion neurons, each of which makes perhaps 10,000 synapses, our incredible central processing unit is capable of roughly 1,000 trillion interconnections. What do scientists know about how this amazingly complex organ functions? Is it even possible to unravel all of its mysteries? In this comprehensive book on the science of the brain, distinguished neurophysiologist R. Grant Steen provides us with a crash course on how the brain works. As a researcher on the forefront of brain studies, Dr. Steen explores the latest findings on a host of topics: Consciousness, unconsciousness, and brain death? Learning, memory, and role of genes? Motivation, aggression, and the range of emotions? The plasticity of the growing brain? Mental illness and treatment? He also delves into such stimulating questions as: Where does creativity come from? What is personality? Can we distinguish between the brain and the mind? Impressive in breadth and depth, yet written with clarity in an engaging, nontechnical style, this fascinating tour of the brain provides the general reader with the latest information on one of the most intriguing and burgeoning areas of scientific research. No topic has more meaning or relevance than using our brains to understand the working of our own minds.

R. Grant Steen, Ph.D. (Chapel Hill, NC) is a neurophysiologist and associate professor of psychiatry at the University of North Carolina School of Medicine, Chapel Hill. He has authored or edited four books including the highly acclaimed *DNA & Destiny: Nature and Nurture in Human Behavior*, in addition to nearly seventy research papers.

**Parenting Matters** Oct 08 2021 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

**Sleeping Through the Night, Revised Edition** Mar 21 2020 Right after "Is it a boy or a girl?" and "What's his/her name?," the next question people invariably ask new parents is "Are you getting any sleep?" Unfortunately, the answer is usually "Not much." In fact, studies show that approximately 25% of young children experience some type of sleep problem and, as any bleary-eyed parent will attest, it is one of the most difficult challenges of parenting. Drawing on her ten years of experience in the assessment and treatment of common sleep problems in children, Dr. Jodi A. Mindell now provides tips and techniques, the answers to commonly asked questions, and case studies and quotes from parents who have successfully solved their children's sleep problems. Unlike other books on the subject, Dr. Mindell also offers practical tips on bedtime, rather than middle-of-the-night-sleep training, and shows how all members of the family can cope with the stresses associated with teaching a child to sleep.
