After analysing children's word forms and their adult targets, Vihman sets out procedures for establishing the children's later prosodic structure and word templates, drawing on data from American and British English, Estonian, Finnish, French, Italian, and Welsh; she also provides briefer longitudinal accounts of template use in Arabic and Brazilian Portuguese. The children are found to start with simple word forms that match their selected adult targets; this is followed by the production of more complex word forms adapted to fit the child's existing patterns. Early accuracy is replaced by later recourse to an 'inner model' - a template that is favoured word shape. The book also examines the timing, fading, quantification, and function of child phonological

templates. In addition, two chapters focus on the use of templates in adult language, in the core grammar and in the creative morphology of colloquial 'short forms' and hypocoristics in French and Estonian and of English rhyming compounds. The idea of templates is traced back to its origins in Prosodic Morphology, but its uses are most in the informal settings of adult language 'at play'. Throughout the volume, the discussion returns to the issues of systematicity, the roles of articulatory and memory challenges for children, and the similarities and differences in the function of templates for adults as compared with children.
