Immigration is a topic that is as important among anthropologists as it is the general public. Almost every culture has experienced adaptation and assimilation when immigrating to a new country and culture; usually leaving for what is perceived as a "better life". Not only does this diaspora change the country of adoption, but also the country of origin. Many large nations in the world have absorbed, and continue to absorb, large numbers of immigrants. The foreseeable future will see a continuation of large-scale immigration, as many countries experience civil war and secessionist pressures. Currently, there is no reference work that describes the impact upon the immigrants and the immigrant societies relevant to the world's cultures and provides an overview of important topics in the world's diasporas. The encyclopedia consists of two volumes covering three main sections: Diaspora Overviews covers over 20 ethnic groups that have experienced voluntary or forced immigration. These essays discuss the history behind the social, economic, and political reasons for leaving the original countries, and the cultures in the new places; Topics discusses the impact and assimilation that the immigrant cultures experience in their adopted cultures, including the arts they bring, the struggles they face, and some of the cities that are in the forefront of receiving immigrant cultures; Diaspora Communities include over 60 portraits of specific

diaspora communities. Each portrait follows a standard outline to facilitate comparisons. The Encyclopedia of Diasporas can be used both to gain a general understanding of immigration and immigrants, and to find out about particular cultures, topics and communities. It will prove of great value to researchers and students, curriculum developers, teachers, and government officials. It brings together the disciplines of anthropology, social studies, political studies, international studies, and immigrant and immigration studies. Your guide to Medicare's National Level II codes! management is a complex, interdisciplinary field that continues to grow and change as global conditions change. Mastering this evolving and multifaceted field of study requires knowledge of the sources and generation of hazardous wastes, the scientific and engineering principles necessary to eliminate the threats they pose to people and the environment, the laws regulating their disposal, and the best or most cost-effective methods for dealing with them. Written for students with some background in engineering, this comprehensive, highly acclaimed text does not only provide detailed instructions on how to solve hazardous waste problems but also guides students to think about ways to approach these problems. It reflects a realistic perspective of the busy medical office environment in which today's medical assistants work. Each chapter refers students to internet resources and is linked to various supplements for further study and practice. Unique organization of content is arranged logically according to the way a patient moves through the medical office. Each chapter identifies the CMA (AAMA) and RMA (AMT) content and competencies, helping students and instructors focus their attention as they read and study. Enrichment topics on relevant "nice-to-know" subjects such as new medical trends, diagnostics, treatments, diseases, etc., add interest and current information. "Focus On" boxes include information on communication, instruction, legal concepts, professionalism, and safety that is important for the student to know. These topics are common threads through each chapter. "On the Job" boxes showcase scenarios using characters from the fictitious medical practice and/or the Saunders Medical Assisting Critical Thinking Video Series (due to publish 10/01) to check on the student's comprehension of the previous material and to challenge critical thinking skills, helping students apply new knowledge to real situations. Student study plans contain exercises at the end of each chapter that help the student to review and use information and skills gained from the chapter to answer critical thinking questions and "what if?" questions. Students are also referred to supplemental materials. "Explore the Web" boxes list key words for internet searches and internet websites for further student study and research.
