After the overwhelming success of 'Asymmetric Synthesis - The Essentials', displaying a broad range of organic asymmetric syntheses, this is the second edition with latest subjects and authors. While the aim of the first edition was mainly to honor the achievements of the pioneers in asymmetric syntheses, the aim of this new edition was bringing the current developments, especially from younger colleagues, to the attention of students. The format of the book remained unchanged, i.e. short conceptual overviews by young leaders in their field including a short biography of the authors. The growing multidisciplinary research within chemistry is reflected in the selection of topics including metal catalysis, organocatalysis, physical organic chemistry, analytical chemistry, and its applications in total

synthesis, materials research and industry. The prospective reader of this book is a graduate or undergraduate student of advanced organic chemistry as well as the industrial chemist who wants to get a brief update on the current developments in the field. This book constitutes the refereed proceedings of the Indian Conference on Computer Vision, Graphics and Image Processing, ICVGIP 2006, held in Madurai, India, December 2006. Coverage in this volume includes image restoration and super-resolution, image filtering, visualization, tracking and surveillance, face-, gesture-, and object-recognition, compression, content based image retrieval, stereo/camera calibration, and biometrics. Reports for 1908-1929 include Supplement to the "Guide to the experimental plots". This report contains the results of phototheodolite data accumulated on 183 daylight landing operations of scheduled air carriers flying the Boeing 707, 707B, 720, 720B, Convair CV-880, and Douglas DC-8 jet airplane models. These measurements were obtained during the months of June and July 1961 at Chicago O'Hare Airport, San Francisco International Airport, Denver Stapleton Airport, and Dallas Love Field. Reprint of the original, first published in 1874. First discussions on several topics of this book took place at a symposium held at the University of Karlsruhe (July 14 - 21, 1985). The book is divided into nine parts with the headings "Methodology and Methods" (4 papers), "Prices" (9), "Efficiency" (5), "Preferences" (7), "Quality" (2), "Inequality" (6), "Taxation" (6), "Aggregation" (6), and "Econometrics" (6). The topics range from the "equation of measurement", a functional equation which plays an important role in the subject, through various approaches to price, efficiency, inequality and tax progression measurement to results on consistency, efficiency and separability in aggregation, productivity measurement, cost functions, allocation inefficiencies, key sector indices, and testing of integrability conditions in econometrics. There are applications to the economies of the U.S.A., Japan and Germany. It contains also papers which deal with preferences, environmental quality and with noxiousness of substances. As human populations grow, so do the resource demands imposed on ecosystems, and the impacts of anthropogenic use and abuse are becoming ever more apparent. This has led to the development of the concept of ecosystem services, which describes the beneficial functions provided by ecosystems for human society. Ecosystem services are limited and hence threatened by over-exploitation, and there is an urgent imperative to evaluate trade-offs between immediate and long-term human needs and to take action to protect biodiversity, which is a key factor in delivering ecosystem services. To help inform decision-makers, economic value is increasingly being associated with many ecosystem services and is often based on the replacement with anthropogenic alternatives. The on-going challenges of maintaining sustainable ecosystems and prescribing economic value to nature is prompting multi-disciplinary shifts in how we recognise and manage the environment. This volume brings together emerging topics in environmental science, making an excellent source for policy makers and environmental consultants working in the field or related areas. Ecosystem Services also serves as a concise and referenced primer for advanced students and researchers in environmental science and management. The objective of the Handbooks programme is the preparation of critical reviews and evaluations of evidence on the cancer-preventive and other relevant properties of a wide range of potential cancer-preventive agents and strategies by international working groups of experts. In this volume on non-steroidal anti-inflammatory drugs the following drugs are reviewed: Aspirin, Sulindac, Piroxicam and Indomethacin. For each drug, their chemical and physical characteristics, occurrence, production, use, analysis and human exposure, metabolism, kinetics and genetic variation are studied, as well as their cancer-preventive effects, other beneficial effects, carcinogenicity and other toxic effects. A summary of data and recommendations for research are provided at the end. The essential reference for human development theory, updated and reconceptualized The Handbook of Child Psychology and Developmental Science, a four-volume reference, is the field-defining work to which all others are compared. First published in 1946, and now in its Seventh Edition, the Handbook has long been considered the definitive guide to the field of developmental science. Volume 1, Theory and Method, presents a rich mix of classic and contemporary theoretical perspectives, but the dominant views throughout are marked by an emphasis on the dynamic interplay of all facets of the developmental system across the life span, incorporating the range of biological, cognitive, emotional, social, cultural, and ecological levels of analysis. Examples of the theoretical approaches discussed in the volume include those pertinent to human evolution, self regulation, the development of dynamic skills, and positive youth development. The research, methodological, and applied implications of the theoretical models discussed in the volume are presented. Understand the contributions of biology, person, and context to development within the embodied ecological system Discover the relations among individual, the social world, culture, and history that constitute human development Examine the methods of dynamic, developmental research Learn person-oriented methodological approaches to assessing developmental change The scholarship within this volume and, as well, across the four volumes of this edition, illustrate that developmental science is in the midst of a very exciting period. There is a paradigm shift that involves increasingly greater understanding of how to describe, explain, and optimize the course of human life for diverse individuals living within diverse contexts. This Handbook is the definitive reference for educators, policy-makers, researchers, students, and practitioners in human development, psychology, sociology, anthropology, and neuroscience. Winner of ISSTD's 2009 Pierre Janet Writing Award for the best publication on dissociation in 2009! Dissociation and the Dissociative Disorders is a book that has no real predecessor in the dissociative disorders field. It reports the most recent scientific findings and conceptualizations about dissociation; defines and establishes the boundaries of current knowledge in the dissociative disorders field; identifies and carefully articulates the field's current points of confusion, gaps in knowledge, and conjectures; clarifies the different aspects and implications of dissociation; and sets forth a research agenda for the next decade. In many respects, Dissociation and the Dissociative Disorders both defines and redefines the field. Dietary Omega-3 Polyunsaturated Fatty Acids and Cancer provides all the latest information on the possible benefits of omega-3 polyunsaturated fatty acids (PUFAs) against a wide series of cancers. Several influential scientists in this field have contributed to make this book unique amongst the others published so far in this field. The chapters give detailed information about the results obtained in this field through experimental studies conducted on both animals and cultured cells, as well as through human intervention trials and epidemiological observational studies. This book represents an important tool for researchers working in nutrition and oncology, since it collects all the knowledge about omega-3 PUFAs and cancer, even the most recent, in a single publication. For the first time controversies among the different studies are also covered with great detail in this book. The book enables physicians to clearly understand on a scientific basis if their oncologic patients or patients at risk of cancer could actually benefit from a diet enriched in omega-3 PUFAs or from a dietary supplementation with these fatty acids. The book represents also a good resource for ordinary individuals as well as cancer patients to learn more about omega-3 PUFAs and understand how these dietary components may affect cancer growth.
