[Tools for Port Authority Transportation Reinvestment Zones \(TRZ\) and TRZs for Multimodal Application](#) May 06 2021 In 2007, the Texas legislature created an innovative transportation funding mechanism called the transportation reinvestment zone (TRZ) that allows municipal and county governments to set aside local match contributions for the transportation projects most critical to their communities. TRZs are relatively new tools for infrastructure finance that allow governmental entities with taxing authority to set aside local match contributions for transportation projects and capture the land value increases that result from the transportation projects. In 2013, lawmakers made TRZs available to port authorities and navigation districts, the governmental entities that operate Texas ports. The main goal of this research project was to assist Texas Department of Transportation staff, Texas port authorities, and local government stakeholders in understanding port authority TRZs—how they work and how they might be of benefit to a port authority, its surrounding community, and the U.S. and Texas State Highway Systems. More specifically, this research aimed to: (a) document the processes for establishing Port Authority TRZs, (b) identify the TRZs that have been established to date, (c) develop a more systematic understanding of the types of projects that are TRZ eligible in the context of port authority TRZs and the interactions of TRZ funding in the context of port funding/finance and how that may vary across port types in Texas, (d) develop an understanding of land development in port jurisdictions, and (e) develop tools and guidance to facilitate the implementation process of port TRZs. The findings of this research are summarized in this report.

**A Practitioner's Guide to Effective Maritime and Port Security** Dec 01 2020 Sets forth practices to ensure security and foster international trade Written with an international perspective, this book analyzes the complex set of factors affecting the security of port and maritime operations, including shipping, politics, economics, crime, and terrorism. Author Michael Edgerton critiques current approaches to maritime and port security based on his more than twenty-five years of experience in the field. He not only points out vulnerabilities in today's practices, but also provides a set of proven and tested recommendations that recognize the role and interests of both government and the private sector in enhancing security while ensuring the flow of international trade. Readers may be surprised to learn that, with greater efficiency, they can actually improve security while reducing the cost of security at the same time. Using real-world case studies to support its analyses and recommendations, *A Practitioner's Guide to Effective Maritime and Port Security*: Reviews the core components of the international maritime operating environment Assesses the potential threats to ports in the maritime environment Examines approaches to maritime port security in the United States, European Union, and around the world Presents principles for effective, risk-based maritime and port security At the end of the book, two appendices provide a framework for conducting security risk assessments and threat assessments. There's also a third appendix to help organizations assess their "risk appetite." Recommended for students and professionals responsible for the safety and security of ports and maritime trade, this book reframes port and maritime security as a key component of a multidisciplinary system in which secure and efficient trade is the objective.

[Reclaiming the Sky](#) Jan 22 2020 On the morning of September 11, 2001, thousands of airline and airport professionals headed off for what they assumed would be just another day on the job. It was anything but. Approaching the fifth anniversary of that tragic day, the stories of the heroes and casualties among these dedicated air travel workers remain largely untold—until now. A compassionate and ultimately uplifting reflection on the nature of loss and the seeds of recovery, *Reclaiming the Sky* honors not only those workers who died doing their jobs, but also the ones that soldiered through on that day and in the aftermath, tirelessly piecing back together the fragments of a shattered industry—and indeed a critical social and economic force—while putting aside their own fears and grief. In conjunction with a website, [reclaimingthesky.com](#)—where readers can share their stories and thoughts—the book not only honors the heroes and casualties of 9/11, it also offers common ground to those seeking meaning, purpose and the strength to move forward.

**Empire on the Hudson** Apr 29 2023 Revered and reviled in almost equal amounts since its inception, the Port Authority of New York and New Jersey has been responsible for creating and maintaining much of New York and New Jersey's transportation infrastructure—the things that make the region work. Doig traces the evolution of the Port Authority from the battles leading to its creation in 1921 through its conflicts with the railroads and its expansion to build bridges and tunnels for motor vehicles. Chronicling the adroit maneuvers that led the Port Authority to take control of the region's airports and seaport operations, build the largest bus terminal in the nation, and construct the World Trade Center, Doig reveals the rise to power of one of the world's largest specialized regional governments. This definitive history of the Port Authority underscores the role of several key players—Austin Tobin, the obscure lawyer who became Executive Director and a true "power broker" in the bi-state region, Julius Henry Cohen, general counsel of the Port Authority for its first twenty years, and Othmar H. Ammann, the Swiss engineer responsible for the George Washington Bridge, the Bayonne and Goethels bridges, the Outerbridge Crossing, and the Lincoln Tunnel. Today, with public works projects stalled by community opposition in almost every village and city, the story of how the Port Authority managed to create an empire on the Hudson offers lessons for

citizens and politicians everywhere.
