Surgical orthopedic procedures such as hip replacements, arthroscopy or knee replacements are surrounded by pre- and post-operative complications, and there are varying different methods for the procedures themselves. This book, for the first time, brings together the best evidence for treatments as well as any complications. Not only does it cover the evidence base for orthopedic surgery, but also orthopedic conditions requiring medical treatment, and pediatric orthopedics. Using the approved EBM methodology, and edited by teachers of evidence-based medicine, this is a genuine EBM textbook for all orthopedic specialists and trainees. Transcatheter Valve Repair discusses all aspects related to percutaneous and established valve repair methods. The book is divided into few major sections covering all four valves and other topics. Each section contains several chapters discussing everything related to that valve. Beginning with the pulmonary valve, since it was the first valve to be tackled in the catheterization laboratory, and then moving to the aortic, then the mitral and then finally end with the tricuspid valve. 1.5M US citizens alone have some degree of aortic valve stenosis, with half (750K) requiring aortic valve replacement. Aortic valve replacement, on the whole, is performed by surgeons, requiring bypass machines and technicians, as well as the usual operating team. The operation is expensive and occupies a considerable amount of operating room time. Mostly, the aortic valve is calcified and the usual option available to patients is valve replacement with a variety of choices, ranging from porcine valves to synthetic, for which there are many manufacturers. It should be noted that the aortic valve is the most problematic of valves. Percutaneous procedures are the answer. The bottom line is that given the growing elderly population, many more patients will require valve repair, thus increasing health care costs with not only surgical operations but also hospitalisation. Percutaneous valve repair, whilst requiring a cath lab team, does not involve bypass machines nor extended hospitalisation. Like percutaneous transluminal coronary artery interventions (PTCA) has replaced coronary artery bypass grafts (once the golden standard), and now stenting having replaced PTCA and its balloons. We now see drug eluting stents replacing ordinary stents (though at a much higher cost. There will be a huge movement toward percutaneous valve repair, which should presumably cut costs but also morbidity and mortality. In synopsis, Savage Menace and Other Poems by Richard L. Tierney reconstitutes unusual genre verse back into normal, general readership. His use of form and language generates vivid intensity of action and smooth enactment of "ethereal lyricism"

and "feel for place" (Steven Eng), which fulfill that special "mating of sound and sense" (Brander Matthews) found in the best poetry. Philosophically-underpinned, Tierney's characterisation is authentic and true to life. Poetic artistry of word-choice, atmosphere, and intentional significance combine with his tantalising use of imagination and image-making, to stimulate enjoyment, excitement, comprehension, and belief. Genre-wise, one hundred and seven poems in *Savage Menace* deal with multiple imaginative themes. Fantasy and reality, ranging from supernatural horror and the fantastic, through heroic fantasy, to social critique and existential enquiry, are sustained with precise, careful realism built by the artist. Tierney's expressive abilities set up memorable experiences for the reader and raise the value of *Savage Menace* as literary product. "Parts 1 and 4" relate themes of cosmic trepidation and wonder, and other times and spaces, where a pantheon of strange gods called "The Great Old Ones," created by H. P. Lovecraft are thematically explored and continued. Humorous poetic themes in "Part 2" are superimposed on popular music from 1850 to 1964. Songs like "De Camptown Races," "Puff, the Magic Dragon," and "Goldfinger" are among seven musical compositions which Tierney lyrically re-orchestrates for strangeness and fun. "Part 3" provides a warrior-cycle from the Hyborian Age (projected pre-Iron Age), utilising conceptual themes of Robert E. Howard. "Part 5" rounds off memories of Tierney's great gladiator-sorcerer Simon Magus, who originally drew breath in Biblical sagas. As an American Tierney is published in Australia, with further Australian connection through publisher, editor, co-author Charles Lovecraft (two titles), illustrations by Andrew McKiernan and David Schembri, and fantasy writer Leigh Blackmore ("Appreciation" and co-authorship one title). Tierney's *Savage Menace and Other Poems* represents a life spent dancing with the Grecian Muses of Olympus. It remains well constructed, memorable, and endlessly re-readable. Richard Tierney constitutes an important link between early twentieth century and twenty-first century weird and wider Poetry.

Turner and McIlwraith's *Techniques in Large Animal Surgery, Fourth Edition* is an updated version of the classic resource for step-by-step instruction on basic surgical techniques in cattle, horses, swine, goats, and llamas. With detailed line drawings to demonstrate the principles discussed, the book addresses general aspects of surgery such as anesthesia and equipment and provides descriptions of surgical conditions and techniques commonly encountered in large animal practice. Now including a website with interactive review questions and the figures from the book in PowerPoint, the Fourth Edition is a highly practical, reliable guide for veterinary students and veterinary practitioners with a large animal caseload. The Fourth Edition includes eight new techniques and completely rewritten chapters on anesthesia, equine wound management, and surgical techniques in bovine and swine patients, as well as revisions to reflect advances throughout the book and updated references. Turner and McIlwraith's *Techniques in Large Animal Surgery* continues to supply students and practitioners alike with a valuable resource on the fundamental techniques of farm animal surgery. According to a recent national survey, more construction contractors use QuickBooks Pro and QuickBooks than all other accounting programs combined. And for good reason. QuickBooks Pro excels at all the routine paperwork in a construction office: writing checks, keeping track of your bank balance, sending out invoices and statements, creating up-to-the-minute profit and loss statements for the month, year or by job, writing payroll checks, paying suppliers and subcontractors, tracking job costs, comparing estimated and actual costs for each job, and much more. But there's a lot to learn in QuickBooks Pro. And converting to a new accounting system can be a complex and confusing task, even if you have a strong background in accounting and plenty of time to install the new system. That's why this book was written -- because most construction pros aren't accounting experts and have more important work to do at the job site. Composed of contributions from an international team of leading researchers, this book pulls together the most recent research results in the field of cancer modeling to provide readers with the most advanced mathematical models of cancer and their applications. Topics included in the book cover oncogenetic trees, stochastic multistage models of carcinogenesis, effects of ionizing radiation on cell cycle and genomic instability, induction of DNA damage by ionizing radiation and its repair, epigenetic cancer models, bystander effects of radiation, multiple pathway models of human colon cancer, and stochastic

models of metastasis. The book also provides some important applications of cancer models to the assessment of cancer risk associated with various hazardous environmental agents, to cancer screening by MRI, and to drug resistance in cancer chemotherapy. An updated statistical design and analysis of xenograft experiments as well as a statistical analysis of cancer occult clinical data are also provided. The book will serve as a useful source of reference for researchers in biomathematics, biostatistics and bioinformatics; for clinical investigators and medical doctors employing quantitative methods to develop procedures for cancer diagnosis, prevention, control and treatment; and for graduate students. Modern medical imaging and radiation therapy technologies are so complex and computer driven that it is difficult for physicians and technologists to know exactly what is happening at the point-of-care. Medical physicists responsible for filling this gap in knowledge must stay abreast of the latest advances at the intersection of medical imaging and radiation therapy. This book provides medical physicists and radiation oncologists current and relevant information on Adaptive Radiation Therapy (ART), a state-of-the-art approach that uses a feedback process to account for patient-specific anatomic and/or biological changes, thus delivering highly individualized radiation therapy for cancer patients. The book should also benefit medical dosimetrists and radiation therapists. Adaptive Radiation Therapy describes technological and methodological advances in the field of ART, as well as initial clinical experiences using ART for selected anatomic sites. Divided into three sections (radiobiological basis, current technologies, and clinical applications), the book covers: Morphological and biological biomarkers for patient-specific planning Design and optimization of treatment plans Delivery of IMRT and IGRT intervention methodologies of ART Management of intrafraction variations, particularly with respiratory motion Quality assurance needed to ensure the safe delivery of ART ART applications in several common cancer types / anatomic sites The technology and methodology for ART have advanced significantly in the last few years and accumulated clinical data have demonstrated the need for ART in clinical settings, assisted by the wide application of intensity modulated radiation therapy (IMRT) and image-guided radiation therapy (IGRT). This book shows the real potential for supplying every patient with individualized radiation therapy that is maximally accurate and precise. Providing a wealth of guidelines and background information on postsurgical rehabilitation of the orthopedic patient in a convenient format, this portable reference is the therapist's first choice for a quick overview of the rehabilitation plan following orthopedic surgery. Quickly find and review the information you need with convenient bulleted rehabilitation guideline tables. Succinct overviews of surgical procedures help you remember key details of surgical procedures. Brief overviews of rehabilitation plans let you quickly review the principles and strategies of rehabilitation that promote healing and recovery from orthopedic surgical procedures. Criteria for advancement help you determine when your patient is ready to advance to the next phase of rehabilitation. Editors and contributors from one of the world's most prestigious orthopedic hospitals provide authoritative guidance on orthopedic rehabilitation. Since the publication of the first edition of Urethral Reconstructive Surgery, important refinements have been added to the urologic surgical armamentarium. Extensively revised and updated, Advanced Male Urethral and Genital Reconstructive Surgery, Second Edition guides urologists in a practical manner on how to evaluate and manage complex urethral and male genital reconstructive challenges. Chapters have been added on wound healing, synchronous urethral strictures, non-transecting anastomotic urethroplasty (including muscle and vessel sparing), overlapping buccal grafts, male urethral slings, genital skin grafting, Peyronie's surgery, priapism, pediatric strictures and prosthetics. Such chapters greatly strengthen the overall appeal of the book. The volume closes with a new comprehensive appendix of preferred instruments. With broad contributions by international authorities in reconstructive urologic surgery, Advanced Male Urethral and Genital Reconstructive Surgery, Second Edition is a valuable resource for all urologists, from residents to reconstructive surgeons. This is the first book to cover every aspect of the Savage 99 family of centerfire rifles from

the prototypes to the last rifle produced, including Savage's only production military rifle, the Montreal Home Guard musket from WWI. It is also the first book on the Model 99 to be photo driven, with more than 250 color images. The book covers the variations in each model and addresses comparisons between similar models; dispels a number of myths, misconceptions, and catalog errors and omissions; and contains complete production figures by serial number and year. Special features and factory engraved rifles are also included, covering every style of engraving by Enoc Tue in the early twentieth century, the 99K, the PE and DE, and commemoratives. The rise of two ironfisted dictators creates a stunning national security threat for the American government: open war with Mexico. The volatile leaders of Honduras and Mexico have a blood deal financed by black gold, an oil pipeline built across Guatemala. Mack Bolan accepts a clear directive from the Man—stop the guerrilla raids and repel the invasion force. Bolan brings hell to Honduras, smashing the pipeline and blitzing through the shock troops spreading waves of terror across Central America. Gaining and keeping the battlefield momentum is Bolan's stock in trade. But the end game means neutralizing a violent incursion onto U.S. soil and toppling two brutal regimes by any and all means necessary. "The eighty-three documents presented here, varied in length and character, are not all concerned with Suffolk, but they are all connected with the eventful lives of Sir Thomas (later Viscount) Savage and his wife Elizabeth Savage (later Countess Rivers), who married in 1602 and whose homes included Melford Hall." "Thomas and Elizabeth both inherited considerable estates in Suffolk, Essex and Cheshire. Within a tight circle of aristocratic Catholics, they became prominent servants of the royal family during the reigns of James I and Charles I. After Thomas's death in 1635, Elizabeth remained an intimate of the queen, but her two houses of St. Osyth's and Melford Hall were sacked in 1642, and she remained chronically short of money up to her death in 1651." "The central document is a remarkable inventory of 1635-6, taken after Thomas died, listing the contents of Melford Hall in Suffolk, Rocksavage in Cheshire and a town house on Tower Hill in London."--BOOK JACKET. The book helps the reader to better understand cytogenetics and the intricacies of the methodology. The different methods of fluorescence in situ hybridization are discussed and the results achieved are presented. The book provides a comprehensive review of basic and applied aspects of cytogenetics and thus is of intense interest to all those interested in chromosomes and their alterations by different types of mutagens, including chemical mutagens and ionizing and nonionizing radiation, with special reference to electromagnetic fields. Humans are imperfect, and problems of speaking, hearing and understanding are pervasive in ordinary interaction. This book examines the way we 'repair' and correct such problems as they arise in conversation and other forms of human interaction. The first book-length study of this topic, it brings together a team of scholars from the fields of anthropology, communication, linguistics and sociology to explore how speakers address problems in their own talk and that of others, and how the practices of repair are interwoven with non-verbal aspects of communication such as gaze and gesture, across a variety of languages. Specific chapters highlight intersections between repair and epistemics, repair and turn construction, and repair and action formation. Aimed at researchers and students in sociolinguistics, speech communication, conversation analysis and the broader human and social sciences to which they contribute - anthropology, linguistics, psychology and sociology - this book provides a state-of-the-art review of conversational repair, while charting new directions for future study. Dr. James Wright, Associate Editor for the Journal of Bone and Joint Surgery, presents this landmark publication and novel approach to orthopaedic problems and solutions. Focusing on three literary classics - Charles Dickens's *Bleak House* (1853); Gustave Flaubert's *Madame Bovary* (1857); and Thomas Mann's *Buddenbrooks* (1901) - Peter Gay, a cultural historian, demonstrates that there is more than one way to read a novel. Typically readers believe that fiction, especially those that dominated the Western culture of the 19th century, is based on historical truth. Gay uses his examples to show that novels take their own path to reality. He discovers, by exploring their world, craftsmanship and their minds, that all three novelist share one overriding quality - a resentment and rage against the society that sustains the novel itself. When a missing American nuclear scientist, armed with fissionable material, resurfaces as a member of a guerilla women's rights organization in Pakistan and becomes the target of rebel fighters, Mack Bolan is sent in to extract the woman and bring her to the United States. Original. This book is intended for students and scientists working in the field of DNA repair, focusing on a number of topics ranging from DNA damaging agents and mechanistic insights to methods in DNA repair and insights into therapeutic strategies. These topics demonstrate how scientific ideas are developed, tested, dialogued, and matured as it is meant to discuss key concepts in DNA repair. The book should serve as a supplementary text in courses and seminars as well as a general reference for biologists with an interest in DNA repair. Guest editors Jin Bo Tang and Grey Giddons have assembled an expert team of authors on the topic of Hand Surgery in Asia and Europe. Article topics include: Multiple Digit and major limb replantation in Asia and Europe; Microsurgical flaps in repair and reconstruction of the hand; Composite tissue transfer: Novel techniques; Primary flexor tendon repair with early active motion: Part 1. Experience in Asia; Primary flexor tendon repair with early active motion: Part 2. Experience in Europe; Conservative treatment of hand fractures in United Kingdom; Current European practice in proximal interphalangeal joint arthroplasty; Treatment of scaphoid fractures: European approaches; Carpal ligaments: A functional classification; Current European practice in wrist arthroplasty and more! This book edition is intended to provide a concise summary for select topics in DNA repair, a field that is ever-expanding in complexity and biologic significance. The topics reviewed ranged from fundamental mechanisms of DNA repair to the interface between DNA repair and a spectrum on cellular process to the clinical relevance of DNA repair in oncologic paradigms. The information in this text should provide a foundation from which one can explore the various topics in depth. The book serve as a supplementary text in seminar courses with focus on DNA repair as well as a general reference for scholars with an interest in DNA repair. Scope and ideas of the workshop The workshop which took place at the University of Giessen from Oct. 3 to Oct. 7, 2002 and whose

proceedings are collected in this volume started from the idea to convene a number of scientists with the aim to outline their "visions" for the future of radiation research on the basis of their expertise. As radiation research is a very wide field restrictions were unavoidable. It was decided to concentrate this time mainly on molecular and cellular biology because it was felt that here action is particularly needed. This did not exclude contributions from neighbouring fields as may be seen from the table of contents. It was clearly not planned to have a comprehensive account of the present scientific achievements but the results presented should only serve as a starting point for the discussion of future lines of research, with the emphasis on the "outreach" to other parts of life sciences. If you are interested in the future ask the young – we attempted, therefore, to invite mainly younger colleagues (with a few exceptions) who had, however, already left their marks in the field. They were asked to describe what they felt is important in radiation research and may have significant influences on other branches of life sciences. They were given the task to demonstrate what is lost for science "if we do no longer exist".

The study of valvular heart disease has progressed rapidly over the past two decades. The understanding of etiology and natural history, the precision of noninvasive assessment, and the surgical and interventional management of valve disease have all improved dramatically. Coupled with an appreciation of physiologic principles, thoughtful interviews and physical exam, current technology allows clinicians to characterize all types of valve lesion. In addition, evolving techniques in interventional cardiology and cardiac surgery, guided by quantitative outcome analysis, have reduced the morbidity and mortality of these procedures. Reflecting all the above and evidence-based medical practice, the authors aim to provide a concise and straightforward guide to the recognition and management of valvular heart disease, complemented by current guidelines and abundant high quality images. It will be a valuable reference for all involved in the care of patients with valvular heart disease, including cardiologists in practice and training, young hospital doctors, general physicians, cardiac nurse specialists, and medical students. Bringing together the reflections of an architectural theorist and a philosopher, this book encourages philosophers and architects, scholars and designers alike, to reconsider what they do as well as what they can do in the face of challenging times. It does so by exploring the notion that architecture and design can (and possibly should), in their own right, make for a distinctive form of ethical investigation. The book is less concerned with absolutist understandings of the two components of ethics, a theory of 'the good' and a theory of 'the right', than with remaining open to multiple relations between ideas about the built environment, design practices and the plurality of kinds of human subjects (inhabitants, individuals and communities) accommodated by buildings and urban spaces. The built environment contributes to the inculcation of all sorts of values (good and bad). Thus, this book aims to change the way people commonly think about ethics, not only in relation to the built environment, but to themselves, their ways of thinking and modes of behaviour. "Function is the focus of any hand surgery, a frequently performed procedure by reconstructive plastic surgeons. The topics in this volume of Clinics in Plastic Surgery work their way through soft tissue procedures of the fingers and hand through the upper arm. The more common conditions and commonly performed surgeries are presented here along with the more difficult and complicated procedures. Topics include: Current practice of soft tissue repair of fingertip; Microsurgical soft tissue and bone transfers in complex hand trauma; Full cosmetic reconstruction of the digits by composite tissue grafting; Methods, pitfalls, and common mistakes in treatment of fractures in the digits; Venous flap and free style free flap in hand surgery; Management of pain in peripheral nerves; Technical difficulties of surgical treatment and salvage of treatment failure in Dupuytren's disease; Surgical treatment of cubital tunnel syndrome; Distal radius fracture: indications, treatment, controversies; Repair, autografts, conduits, and allografts for digital and forearm nerves: current guidelines. Two experts renowned in hand surgery lead this issue - Dr Michael Neumeister and Dr Jin Bo Tang. Dr. James Wright, Associate Editor for the Journal of Bone and Joint Surgery, presents this landmark publication and novel approach to orthopaedic problems and solutions. This book incorporates all aspects of hypospadias management, such as step-by-step correction of chordee and modifications in tabularized urethral plate repair, which is the commonest technique used in hypospadias repair, single-stage two-stage repairs of hypospadias with illustrated descriptions. It provides essential information like history, embryology, anatomy, Radiology in hypospadias, and classification of hypospadias. For the first time, this title presents separate chapters about female hypospadias, correction of torsion associated with hypospadias, and chordee without hypospadias. These chapters will improve the understanding of the subject for the reader and help them in modifying their surgical technique for these patients. Hypospadias surgery has a long learning curve, and the book will help the practitioners make them shorter. The book also deals with acute and chronic complications of surgery which will help the reader prevent complications and manage them. This is a complete book covering all aspects of the evaluation & management of hypospadias and their variants. It includes chapters on a healthy interposition and appropriate use of spongiosum and the techniques of spongioplasty, modifications in flap tube repair, along with the various types of prepuce and prepuceoplasty. In conclusion, the book will provide a comprehensive read for all trainees/fellows and practitioners of Urology, Pediatric urology, Pediatric Surgery, and Plastic Surgery. Neglected finger injuries may lead to chronic lesions that often have detrimental consequences for the practice of

a ball sport, whether at a recreational level or at the top athlete level. The initial injury management is crucial. Depending on the type and the severity of the lesions, different people may get involved: the players themselves or their entourage, physiotherapists, club doctors, emergency physicians, family doctors, sports doctors or hand surgeons. Treatment is usually conservative: the long fingers require rapid mobilization to prevent stiffness and contrary to that, the thumb requires stability. Surgery may be necessary to reach these goals especially for athletes, because of the demands of their sport. Chronic lesions are also in part related to repeated trauma, requiring specialized long-term multidisciplinary treatment. They can often lead to the end of a sporting career, but also may limit the functionality of the fingers at the time of conversion. Dr Chick is Consultant Hand Surgeon in Hôpital de la Tour (Geneva) and Clinique de Genolier, Switzerland, and Visiting Surgeon in Aspetar, Orthopaedic and Sports Medicine Hospital, Doha, Qatar. World renowned for its biological diversity and model conservation system, Costa Rica is home to a wide variety of amphibians and reptiles, from the golden toad to the scorpion lizard and the black-headed bushmaster. Jay M. Savage has studied these fascinating creatures for more than forty years, and in *The Amphibians and Reptiles of Costa Rica* he provides the most comprehensive, up-to-date treatment of their biology and evolution ever produced. Savage begins with detailed discussions of the natural and cultural history of Costa Rica, setting the stage for a detailed treatment of each of the 396 species of amphibians and reptiles that may be found there. Each species account synthesizes and analyzes everything that is known about the animal's anatomy, behavior, geographic distribution, systematics, and evolutionary history and provides keys for identifying amphibians and reptiles in the field. In addition to distribution maps and systematic and morphological illustrations, the book includes color photographs of almost every known species, many taken by the distinguished nature photographers Michael and Patricia Fogden. Because Costa Rica has played, and continues to play, a pivotal role in the study of tropical biology as well as in the development of ecotourism and ecoprospecting, and because more than half of the amphibians and reptiles in Costa Rica are also found elsewhere in Central America, *The Amphibians and Reptiles of Costa Rica* will be an essential book for a wide audience of nature lovers, naturalists, ecotourists, field biologists, conservationists, and government planners.
