What does a new technology of images mean for the ways in which we encounter and use images in everyday life: in advertising, entertainment, news, evidence? And within our domestic and private worlds for our sense of self and identity; our view of the body and our sexuality? The Photographic Image in Digital Culture explores the technological transformation of the image and its implications for photography. Contributors investigate such issues as the relationship of technological change to visual culture; the new discourses of 'techno-culture'; medicine's new vision of the body, and interactive pornography. They also examine the cultural meanings of new surveillance images; shifts in the domestic consumption of images and their relationship to memory, history and biography; the social uses of video and computer games and the changing role of photography as document and as art. Photography has transformed the way we picture ourselves. Although photographs seem to "prove" our existence at a given point in time, they also demonstrate the impossibility of framing our multiple and fragmented selves. As Linda Haverty Rugg convincingly shows, photography's double take on self-image mirrors the concerns of autobiographers, who see the self as simultaneously divided (in observing/being) and unified by the autobiographical act. Rugg tracks photography's impact on the formation of self-image through the study of four literary autobiographers concerned with the transformative power of photography. Obsessed with self-image, Mark Twain and August Strindberg both attempted (unsuccessfully) to integrate photographs into their autobiographies. While Twain encouraged photographers, he was wary of fakery and kept a fierce watch on the distribution of his photographic image. Strindberg, believing that photographs had occult power, preferred to photograph himself. Because of their experiences under National Socialism, Walter Benjamin and Christa Wolf feared the dangerously objectifying power of photographs and omitted them from their autobiographical writings. Yet Benjamin used them in his photographic conception of history, which had its testing ground in his often-ignored Berliner Kindheit um 1900. And Christa Wolf's narrator in Patterns of Childhood attempts to reclaim her childhood from the Nazis by reconstructing mental images of lost family photographs. Confronted with multiple and conflicting images of themselves, all four of these writers are torn between the knowledge that texts, photographs, and indeed selves are haunted by undecidability and the desire for the returned glance of a single self. An engaging and provocative account of photography's first commercial applications in England and their global implications. This book addresses a persistent gap in the study of photography's history, moving beyond an appreciation of single breakthrough works to consider the photographic image's newfound reproducibility and capacity for circulation through newsprint and other media in the nineteenth century. Fragmentation of the Photographic Image in the Digital Age challenges orthodoxies of photographic theory and practice. Beyond understanding the image as a static representation of reality, it shows photography as a linchpin of dynamic developments in augmented intelligence, neuroscience, critical theory, and cybernetic cultures. Through essays by leading philosophers, political theorists, software artists, media researchers, curators, and experimental programmers, photography emerges not as a mimetic or a recording device but simultaneously as a new type of critical discipline and a new art form that stands at the crossroads of visual art, contemporary philosophy, and digital technologies. Examines the development and social impact of photography and phototechnology, surveys photographic subjects such as the nude and the landscape, and discusses the lives and works of important photographers. The Nature of Photographs is an essential primer of how to look at and understand photographs, by one of the world's most influential photographers, Stephen Shore. In this book, Shore explores ways of understanding photographs from all periods and all types - from iconic images to found photographs, from negatives to digital files. This book serves as an indispensable tool for students, teachers and everyone who wants to take better pictures or learn to look at them in a more informed way. Photography FAQs: Black and White covers every aspect of black & white photography, from capturing the image to filtration, to developing and printing an image and successful presentation. The title offers detailed responses to the key, reader-defined questions drawn from photographic workshops, consumer press and internet forums, and, as such, is an invaluable and handy reference. The Photography FAQs series is a comprehensive, pocket-size reference for the amateur photographer in the field (or the studio). Each title is formulated as an encyclopaedia of 50 questions and answers covering every aspect of the key photography subjects that come up again and again, including genres such as landscape, portraiture and travel and shooting in monochrome. Each topic is supported by lively, accessible text, inspirational images and clear, easy-to-navigate design that makes this series a quick-and easy reference. An analysis of how the shrinking sound-bite has been replaced by the manipulated image in American politics and culture. The author documents and analyzes the pervasive and self-conscious role of image-making in campaign coverage where talk of media events and spin control have become the norm. Award-winning photographer Matt Black traveled over 100,000 miles to chronicle the reality of today's unseen and forgotten America. When Magnum photographer Matt Black began exploring his hometown in California's rural Central Valley—dubbed “the other California,” where one-third of the population lives in poverty—he knew what his next project had to be. Black was inspired to create a vivid portrait of an unknown America, to photograph some of the poorest communities across the US. Traveling across forty-six states and Puerto Rico, Black visited designated “poverty areas,” places with a poverty rate above 20 percent, and found that poverty areas are so numerous that they're never more than a two-hour's drive apart, woven through the fabric of the country but cut off from “the land of opportunity.” American Geography is a visual record of this five-year, 100,000-mile road trip, which chronicles the vulnerable conditions faced by America's poor. This compelling compilation of black-and-white photographs is accompanied by Black's own travelogue—a collection of observations, overheard conversations in cafe's and public transportation, diner menus, bus timetables, historical facts, and snippets from daily news reports. A future classic of photography, this monograph is supported by an international touring exhibition and is a must-have for anyone with an interest in witnessing the reality of an America that's been excluded from the American Dream. This innovative volume explores the idea that while photographs are images, they are also objects, and this materiality is integral to their meaning and use. The case studies presented focus on photographs active in different institutional, political, religious and domestic spheres, where physical properties, the nature of their use and the cultural formations in which they function make their 'objectness' central to how we should understand them. The book's contributions are drawn from disciplines including the history of photography, visual anthropology and art history, with case studies from a range of countries such as the Netherlands, North America, Australia, Japan, Romania and Tibet. Each shows the methodological strategies they have developed in order to fully exploit the idea of the materiality of photographic images. This new edition of The Photographic Image in Digital Culture explores the condition of photography after some 20 years of remediation and transformation by digital technology. Through ten especially commissioned essays, by some of the leading scholars in the field of contemporary photography studies, a range of key topics are discussed including: the meaning of software in the production of photograph; the nature of networked photographs; the screen as the site of photographic display; the simulation of photography in the videogame; photography, ubiquitous computing and technologies of ambient intelligence; developments in vernacular photography and social media; the photograph and the digital archive; the curation and exhibition of the networked photograph; the dominance of the image bank in commercial and advertising photography; the complexities of citizen photojournalism. A recurring theme addressed throughout is the nature of 'photography after photography' and the paradoxical nature of the medium in the 21st century; a time when the traditional technology of photography has become defunct while there is more 'photography' than ever. This is an ideal book for students studying photography and digital media. The acclaimed author of My Birth asks: can photographs help us live? A timely and explosive book by acclaimed artist and writer Carmen Winant, Instructional Photography offers an investigation of a genre of photographs Winant calls “instructional.” It asks: can photographs teach, in and of themselves? Alternating between found images and shorter, text-based observations, Winant delves into this category of images through her own collection, understanding them as something beyond, or at least in between, documentary and fine art. Included in the volume are pictures of dog-training techniques, home gynecological exams and sitting Shiva, among many others. The book builds on a presentation that Winant delivered at the MoMA Contemporary Photo Forum in September 2020. Carmen Winant (born 1983) is an artist and writer based in Columbus, Ohio, where she is the Roy Lichtenstein Endowed Chair of Studio Art at Ohio State University. Her recent artist's books, My Birth and Notes on Fundamental Joy, were published by SPBH Editions, ITI Press and Printed Matter. Written by renowned photographer, author, and broadcaster Tom Ang, this book delivers exactly what the title promises and tells you how to photograph absolutely everything. Avoiding intimidating technical jargon, Tom explains the basic elements of photography - light, color, composition, and focus - then goes on to show how to make them work for you. From still lifes to children's parties, thunderstorms to sunsets, close-ups to panoramas, every photographic subject, technique, and challenge is covered. Using step-by-step photographs and instructions, Tom shows you how to take the best possible picture in any situation. Want to photograph city lights at night, animals in action, a family portrait? Tom makes it easy. Employing a user-friendly "recipe" formula, he shows you the best approach for each subject, gives expert tips on improving an image, and tells you how to set up your camera - so you really can't go wrong. Inspiring galleries at the end of each section describe alternative techniques to try for every subject. There are also tips on basic post-production, showing how to crop, improve color and contrast, and remove unwanted elements of an image. How to Photograph Absolutely Everything guarantees to make a better, more confident photographer of absolutely everyone who reads it. Photography is a complex craft. Some excel at the technical side of image-making, focusing perfectly on the subject, releasing the shutter at just the right moment and making exposures with the precise amount of light. Others are artists and storytellers, capturing a fleeting moment in time which inspires a viewer to gaze upon an image and ponder its meaning. The best photographers are masters of both. In this highly visual, informative new book, Angela Faris Belt discusses the four crucial elements of photography that are essential for successful technical and conceptual image-making: .the photographic frame and its borders .quality of focus as determined by the aperture or lens .shutter speeds and their effects in relation to time and motion .the physical media used to create the aggregate image Step-by-step guidance including informative screen shots, traditional darkroom and Photoshop techniques, suggested exercises, and before and after images help both film and digital photographers improve their skills, learn new techniques, and better understand their craft. More than 300 stunning, full color images and portfolios featuring the work of over 40 prestigious artists provide visual inspiration as well as a gorgeous collection of artwork for photography enthusiasts. FotoFest 1992, a major festival of international photography, brought Latin American photography into focus for a wide audience. Offering a diverse selection of photographers, countries, artistic movements, and subject matter, the show revealed a photographic tradition rich in history and creativity. Drawing from the more than 1,000 images exhibited by FotoFest, this book documents the work of fifty-two photographers from ten countries. The photographs range from the opening of the Brazilian frontier in the 1880s to a secret archive of documentary images from El Salvador's recent civil war to works of specifically aesthetic intent. Many of the photographs appear here in print for the first time. Watriss's opening essay provides the curatorial overview for the book. Lois Zamora examines the roots of visual image-making in Latin American cultures. Boris Kossov addresses the history of Latin American photography through the nineteenth century, while Fernando Castro covers the contemporary scene. With its compelling images and English-Spanish text, this book will serve as a benchmark for future studies of photography in Latin America. 'Failed Images' attempts to understand the divergence between photography and the reality it portrays, analysing the various ways the photograph transforms that which exists before the camera. Because the photographic medium enables very different practices, which in turn results in many kinds of images, it must also be examined from a perspective outside of the dominant approach to the medium, generally called the 'snapshot.' This book therefore explores the photographic image by focusing on practices which refuse this conventional approach, namely staged, blurred, under- and overexposed, and archival photography. Photographs taken in the field provide an extraordinary commentary upon the Civil War "Examining the themes of presence and absence, the relationship between photography and theatre, history and death, these 'reflections on photography' begin as an investigation into the nature of photographs. Then, as Barthes contemplates a photograph of his mother as a child, the book becomes an exposition of his own mind."--Alibris. Brings to life the scientists, artists, philosophers, innovators, and entrepreneurs who developed the art and science of photography. This compendium examines the choices, construction, inclusions and exemptions, and expanded practices involved in the process of creating a photograph. Focusing on work created in the past twenty-five years, this volume is divided into sections that address a separate means of creating photographs as careful constructs: Directing Spaces, Constructing Places, Performing Space, Building Images, and Camera-less Images. Introduced by both a curator and a scholar, each section features contemporary artists in conversation with curators, critics, gallerists, artists, and art historians. The writings include narratives by the artist, writings on their work, and examinations of studio practices. This pioneering book is the first of its kind to explore this topic beyond those artists building sets to photograph. Completely revised and updated throughout, Bryan Peterson's classic guide to creativity helps photographers visualize their work, and the world, in a whole new light by developing their photographic vision. Fully revised with all new photography, this best-selling guide takes a radical approach to creativity by explaining that it is not an inherent ability but a skill that can be learned and applied. Using inventive photos from his own stunning portfolio, author and veteran photographer Bryan Peterson deconstructs creativity for photographers. He details the basic techniques that go into not only taking a particular photo, but also provides insights on how to improve upon it—helping readers avoid the visual pitfalls and technical dead ends that can lead to dull, uninventive photographs. This revised edition features a complete section on color as a design element and all new photographs to illustrate Peterson's points. Learning to See Creatively is the definitive reference for any photographer looking for a fresh perspective on their work. Images In Transition raises questions about the technologies of image making and image transmission, the notion of truth in journalism, and the role of propaganda in news photography. Top photographer Rick Sammon shares his greatest HDR tips and tricks High Dynamic Range (HDR) photography is a process in which a photographer shoots multiple shots of the same subject at varying exposure settings and then "stitches" the images together with photo-editing software into a single photo that presents sharper color and focus than a single image. In this groundbreaking work, Ariella Azoulay thoroughly revises our understanding of the ethical status of photography. It must, she insists, be understood in its inseparability from the many catastrophes of recent history. She argues that photography is a particular set of relations between individuals and the powers that govern them and, at the same time, a form of relations among equals that constrains that power. Anyone, even a stateless person, who addresses others through photographs or occupies the position of a photograph's addressee, is or can become a member of the citizenry of photography. The crucial arguments of the book concern two groups that have been rendered invisible by their state of exception: the Palestinian noncitizens of Israel and women in Western societies. Azoulay's leading question is: Under what legal, political, or cultural conditions does it become possible to see and show disaster that befalls those with flawed citizenship in a state of exception? The Civil Contract of Photography is an essential work for anyone seeking to understand the disasters of recent history and the consequences of how they and their victims are represented. How contemporary photographers from Hank Willis Thomas to Libita Clayton have subverted the constructions and complicities of whiteness From the advent of early colonial photography in the 19th century to contemporary "white savior" social-media images, photography continues to play an integral role in the maintenance of white sovereignty. As various scholars have shown, the technology of the camera is not innocent, and neither are the images it produces. The invention and continuation of the "white race" is not just a political, social and legal phenomenon; it is also a complexly visual one. What does whiteness look like, and how might we begin to trace an antiracist history of artistic resistance that works against it? The Image of Whitenessseeks to introduce its reader to some important extracts from the troubling story of whiteness, to describe its falsehoods, its paradoxes and its oppressive nature, and to highlight some of the crucial work photographic artists have done to subvert and critique its image. The Image of Whitenessincludes the work of artists Abdul Abdullah, Agata Madejska, Broomberg & Chanarin, Buck Ellison, John Lucas & Claudia Rankine, David Birkin, Hank Willis Thomas, Kajal Nisha Patel, Michelle Dizon & Viet Le, Nancy Burson, Nate Lewis, Libita Clayton, Paul Mpagi Sepuya, Richard Misrach, Sophie Gabrielle, Stacy Kranitz and Stanley Wolukau-Wanambwa. The Making of Visual News sets out to show how photography has changed the way we read, report and sell the news. It investigates how photographs first became news images at the end of the nineteenth century and how magazines in the USA, the UK, France and Germany have put them to use ever since. Drawing on a wide selection of images, author Thierry Gervais (in collaboration with Gaëlle Morel) analyses news photographs in the context of their original presentation in print. Highly illustrated, the book contains 85 full colour magazine layouts and spreads, offering the reader a view of how photographs were and are used in print publications, including Life, Picture Post, the Berliner Illustrierte Zeitung and VU. It examines how photographs were employed to attract new readers throughout the twentieth century, arguing that photography was the main tool by which news editors sought to communicate the news and attract a broader readership. Looking beyond the roles of photographer and journalist, this study also highlights the contributions of picture editors and artistic directors; by commissioning photographs and incorporating images into magazine layouts, these figures played critical but often overlooked roles in the construction of visual news, even as they crafted unique styles for their publications. Charting changes in technology and reportage, as well as broader social and political histories, The Making of Visual News offers new insight into the history of photojournalism, making this an essential resource for students and scholars of photojournalism and the history of photography, media and culture A body of photographic work is developed through knowledge gained in exploring the medium: investigating histories and theories of photography, observing the world, reading and listening, taking part in debate and critical

reflection. With 150 images bringing together an eclectic range of photographic styles and genres, Fox and Caruana demonstrate how research can lead to fruitful, original photography projects. Designed to help you create better pictures, for portfolio or for profit, *Research in Photography* offers essential research and communication techniques to complement your technical expertise through a range of practical tools and examples. Two new chapters have been added to this second edition on 'Writing for Research' and 'Commercial Practice', as well as additional coverage discussing how to secure funding and professionalizing research. *Photo Op* is a photo projects book with a difference. Featuring 52 inspirational ideas, backed up by jargon-free practical guidance, it is packed with cliché-busting images from some of the best, brightest, hottest photographers working in the Flickr community - many of whom already have a cult following. This book offers a weekly dose of creative inspiration for photographers and image-makers of all levels, and features diverse challenges ranging from quick-fire results to more immersive techniques. Photographers and image-makers are always on the lookout for inspiration and guidance, and *Photo Op* provides both in a fun, accessible format that will kick-start creativity, enhance skills, and build confidence behind the lens. The real world is full of cameras; the virtual world is full of images. Where does all this photographic activity leave the artist-photographer? *Post-Photography* tries to answer that question by investigating the exciting new language of photographic image-making that is emerging in the digital age of anything-is-possible and everything-has-been-done-before. Found imagery has become increasingly important in post-photographic practice, with the internet serving as a laboratory for a major kind of image-making experimentation. But artists also continue to create entirely original works using avant-garde techniques drawn from both the digital and analogue eras. This book is split into six sections – Something Borrowed, Something New, Layers of Reality, Eye-Spy, Material Visions, Post-Photojournalism and All the World Is Staged – which cover the key strategies adopted by 53 of the most exciting and innovative artist-photographers of the 21st century, drawn from all over the world. Winner of the National Book Critics' Circle Award for Criticism. One of the most highly regarded books of its kind, "On Photography" first appeared in 1977 and is described by its author as "a progress of essays about the meaning and career of photographs." It begins with the famous "In Plato's Cave" essay, then offers five other prose meditations on this topic, and concludes with a fascinating and far-reaching "Brief Anthology of Quotations." This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet. Classic, comprehensive guide to digital and film photographic theory and practice; completely updated for this 8th edition.
