[Engineering and Chemical Thermodynamics](#) Feb 02 2021 Chemical engineers face the challenge of learning the difficult concept and application of entropy and the 2nd Law of Thermodynamics. By following a visual approach and offering qualitative discussions of the role of molecular interactions, Koretsky helps them understand and visualize thermodynamics. Highlighted examples show how the material is applied in the real world. Expanded coverage includes biological content and examples, the Equation of State approach for both liquid and vapor phases in VLE, and the practical side of the 2nd Law. Engineers will then be able to use this resource as the basis for more advanced concepts.

[A Separate Peace](#) Jan 16 2022 Nominated as one of America's best-loved novels by PBS's The Great American Read. An American classic and great bestseller for over thirty years, A Separate Peace is timeless in its description of adolescence during a period when the entire country was losing its innocence to World War II. Set at a boys' boarding school in New England during the early years of World War II, A Separate Peace is a harrowing and luminous parable of the dark side of adolescence. Gene is a lonely, introverted intellectual. Phineas is a handsome, taunting, daredevil athlete. What happens between the two friends one summer, like the war itself, banishes the innocence of these boys and their world.

[Concorde](#) Jul 10 2021 Concorde is the only successful supersonic airliner that there has ever been. The product of collaboration between British and French aviation industries, Concorde first flew in 1969, and entered service in 1976. By the time of its first commercial flight the high hopes for the aircraft's adoption by airlines across the world had evaporated. In the end only its home country's flag carriers, Air France and British Airways, operated the aircraft, on scheduled services between London, New York, Paris, Washington. The crash of one of Air France's machines, and the drop-off in passenger numbers following the September 11th, 2001 terrorist attacks, signaled the end for Concorde. It was retired from service during 2003.

**Tupolev TU-22** Jul 22 2022 This historic Russian aircraft was first delivered to the Soviet Air Force at the height of the Cold War in 1961. It remained in service until replaced by the much modified Tu-22M Backfire which was introduced in the early 1970s and still remains in service. It was the first Soviet supersonic bomber and was used for reconnaissance and bombing, in the latter role carrying either conventional or nuclear bombs. The early aircraft had a range of 1,800 miles but later models had a much increased radius of action through the introduction of in-flight refuelling. This book looks at the design and development of the aircraft up to the introduction of the type M Backfire. Details of construction, weapon systems, photo-reconnaissance and jamming equipment are included to cover the several variant models. Operational use is explained and the text includes many first-hand accounts from Russian aircrew of the period. The book will be superbly illustrated by unique official photographs and manuals.

**Audio Power Amplifier Design** Feb 23 2020 This book is essential for audio power amplifier designers and engineers for one simple reason...it enables you as a professional to develop reliable, high-performance circuits. The Author Douglas Self covers the major issues of distortion and linearity, power supplies, overload, DC-protection and reactive loading. He also tackles unusual forms of compensation and distortion produced by capacitors and fuses. This completely updated fifth edition includes four NEW chapters including one on The XD Principle, invented by the author, and used by Cambridge Audio. Crosstalk, power amplifier input systems, and microcontrollers in amplifiers are also now discussed in this fifth edition, making this book a must-have for audio power amplifier professionals and audiophiles.
