List of fellows for 1908- in v. 25. List of members in each volume (except v. 6, new ser., v. 27) "Memoirs of Sir Isaac Newton's life" from William Stukeley. Antiquary, ed at Cambridge (1687-1765). Publishes research papers in the mathematical and physical sciences. Continued by: Proceedings. Mathematical and physical sciences; and, Proceedings. Mathematical, physical, and engineering sciences. An engaging new history of the Royal Society of London, the club that created modern scientific thought Founded in 1660 to advance knowledge through experimentally verified facts, The Royal Society of London is now one of the preeminent scientific institutions of the world. It published the world's first science journal, and has counted scientific luminaries from Isaac Newton to Stephen Hawking among its members. However, the road to truth was often bumpy. In its early years-while bickering, hounding its members for dues, and failing to create its own museum-members also performed sheep to human blood transfusions, and experimented with unicorn horns. In his characteristically accessible and lively style, Adrian Tinniswood charts the Society's evolution from poisoning puppies to the discovery of DNA, and reminds us of the increasing relevance of its motto for the modern world: Nullius in Verba-Take no one's word for it. List of fellows in v. 1-5, 7-16, 20-30, 32-33, 35-41, 45; continued since 1908 in the Proceedings, v. 28- Someone once said that 'wine is a mixture of chemistry, biology and psychology'. It has certainly fascinated people over the centuries and without a doubt been enjoyed by many. Indeed, from its serendipitous roots as an attempt to store fruit, wine has been woven into the fabric of society; from its use in religion to today's sophisticated products sampled over a meal. The Chemistry and Biology of Winemaking not only discusses the science of winemaking but also aims to provide the reader with a wider appreciation of the impact of oenology on human society. Beginning with a history of wine the book discusses a wide range of topics, with particular emphasis on the organisms involved. Starting with the role of yeast in fermentation,

it goes on to discuss so-called 'killer yeasts', lactic acid bacteria and the role that genetically modified organisms may have in the future. This book is ideal for anyone interested in the process of winemaking and will be of particular use for those with an interest in the chemical and biological sciences. Hello. I am a book. But I'm also a portal to the universe. I have 112 pages, measuring twenty centimetres high and twenty centimetres wide. I weigh 450 grams. And I have the power to show you the wonders of the world. The scientists affiliated with the early Royal Society of London have long been regarded as forerunners of modern empiricism, rejecting the symbolic and moral goals of Renaissance natural history in favor of plainly representing the world as it really was. In *Aesthetic Science*, Alexander Wragge-Morley challenges this interpretation by arguing that key figures such as John Ray, Robert Boyle, Nehemiah Grew, Robert Hooke, and Thomas Willis saw the study of nature as an aesthetic project. To show how early modern naturalists conceived of the interplay between sensory experience and the production of knowledge, *Aesthetic Science* explores natural-historical and anatomical works of the Royal Society through the lens of the aesthetic. By underscoring the importance of subjective experience to the communication of knowledge about nature, Wragge-Morley offers a groundbreaking reconsideration of scientific representation in the early modern period and brings to light the hitherto overlooked role of aesthetic experience in the history of the empirical sciences. "For almost 300 years, an organisation has quietly tried to change almost every aspect of life in Britain. That organisation is the Royal Society for the Encouragement of Arts, Manufactures and Commerce, often known simply as the Royal Society of Arts. It has acted as Britain's private national improvement agency, in every way imaginable - essentially, a society for the improvement of everything and anything. This book is its history. From its beginnings in a coffee house in the mid-eighteenth century, the Society has tried to change Britain's art, industry, laws, music, environment, education, and even culture. It has sometimes even succeeded. It has been a prize-fund for innovations, a platform for Victorian utilitarian reformers, a convenor of

disparate interest groups, and the focal point for social movements. There has never been an organisation quite like it, constantly having to reinvent itself to find something new to improve. The book rewrites many of the old official histories of the Society and updates them to the present day, incorporating over half a century of further research into the periods they covered, along with new insights into the organisation's evolution. The book reveals the hidden and often surprising history of how a few public-spirited people tried to make their country better, offering lessons from their triumphs and their failures for all would-be reformers today"-- This book is an administrative history of the Royal Society, written by its Treasurer Sir Henry Lyons (1864-1944). In it, he reviews the way in which the Society's council governed its affairs during the two and a half centuries in which it gained its reputation in the scientific world. The Royal Entomological Society (RES) and Wiley-Blackwell are proud to present this landmark publication, celebrating the wonderful diversity of the insects of the British Isles, and the work of the RES (founded 1833). This book is the only modern systematic account of all 558 families of British insects, covering not just the large and familiar groups that are included in popular books, but even the smallest and least known. It is beautifully illustrated throughout in full colour with photographs by experienced wildlife photographers to show the range of diversity, both morphological and behavioural, among the 24,000 species. All of the 6,000 genera of British insects are listed and indexed, along with all the family names and higher groups. There is a summary of the classification, biology and economic importance of each family together with further references for detailed identification. All species currently subject to legal protection in the United Kingdom are also listed. The Royal Entomological Society is one of the oldest and most prestigious of its kind in the world. It is the leading organisation for professional entomologists and its main aim has always been the promotion of knowledge about insects. The RES began its famous Handbooks for the Identification of British Insects in 1949, and new works in that series continue to be published. The Royal Entomological Society

Book of British Insects has been produced to demonstrate the on-going commitment of the RES to educate and encourage each generation to study these fascinating creatures. This is a key reference work for serious students of entomology and amateur entomologists, as well as for professionals who need a comprehensive source of information about the insect groups of the British Isles they may be less familiar with. A science journalist travels the world to explore humanity's ecological devastation—and its potential for renewal in this “compelling read” (Guardian, UK). We live in times of profound environmental change. According to a growing scientific consensus, the dramatic results of man-made climate change have ushered the world into a new geological era: the Anthropocene, or Age of Man. As an editor at Nature, Gaia Vince couldn't help but wonder if the greatest cause of this dramatic planetary change—humans' singular ability to adapt and innovate—might also hold the key to our survival. To investigate this provocative question, Vince travelled the world in search of ordinary people making extraordinary changes to the way they live—and, in many cases, finding new ways to thrive. From Nepal to Patagonia and beyond, Vince journeys into mountains and deserts, forests and farmlands, to get an up close and personal view of our changing environment. Part science journal, part travelogue, *Adventures in the Anthropocene* recounts Vince's journey, and introduces an essential new perspective on the future of life on Earth. At one time, Hooke was a research assistant to Robert Boyle. He is believed to be one of the greatest inventive geniuses of all time and constructed one of the most famous of the early compound microscopes.
