Communicating about Risks and Safe Use of Medicines Oct 09 2021 At the core of this book lies the question how to approach medicines, risks and communication as a researcher - or anybody planning and evaluating a communication intervention, or wanting to understand communication events in private and the media. With a view to tackle current shortcomings of communication systems and processes for improved implementation, patient satisfaction and health outcomes, a multilayered approach is presented. This combines multiple data types and methods to obtain a wider and deeper understanding of the major parties and their interactions, as well as the healthcare, social and political contexts of information flows, how they interfere and which impact they have. Illustrated with real life experiences of safety concerns with medicines, worldwide active experts discuss the methods and contributions their disciplines can offer. With considerations on terminologies, tabulated overviews on communication types and outcomes, a patient-centred vision and plain language for non-medical readers, the book creates a platform for multidisciplinary collaborations amongst researchers as well as practitioners from communications, healthcare, the social sciences and pharmacovigilance. Importantly it advocates for an active role of patients and highlights the achievements and aspirations of patient organisations. Finally, the book suggests establishing an inclusive discipline of humanities and epidemiology of medicinal product risk communication to realise full research potential. The authors are driven by the curiosity for communication as the most human behaviour, and as good health is among the basic human needs, medicinal product risk communication is an exciting research field of high global relevance.

A Guide to British Military History Feb 13 2022 What exactly is military history? Forty years ago it meant battles, campaigns, great commanders, drums and trumpets. It was largely the preserve of military professionals and was used to support national history and nationalism. Now, though, the study of war has been transformed by the war and society approach, by the examination of identity, memory and gender, and a less Euro-centric and more global perspective. Generally it is recognised that war and conflict must be integrated into the wider narrative of historical development, and this is why Ian Becketts research guide is such a useful tool for anyone working in this growing field. It introduces students to all the key debates, issues and resources. While European and global perspectives are not neglected, there is an emphasis on the British experience of war since 1500. This survey of British military history will be essential reading and reference for anyone who has a professional or amateur interest in the subject, and it will be a valuable introduction for newcomers to it.

The author introduces the topic of community resilience as it applies to disasters in Chapter 1 and its implications for securing and improving the wellbeing of disaster-affected communities in Chapters 2 and 3. In Chapter 4, the lessons learned contributing to the available information and research on community resilience are reviewed.
