The first edition of this book, published in 1993, introduced 15 remarkable children, some of the most gifted young people ever studied, and traced their path through school, exploring their academic achievements (and in some cases enforced underachievement), their emotional development, their social relationships and their family relationships and upbringing. This new edition reviews these early years but also follows the young people over the subsequent ten years into adulthood. No previous study has traced so closely and so sensitively the intellectual, social and emotional development of highly gifted young people. This 20 year study reveals the ongoing negative academic and social effects of prolonged underachievement and social isolation imposed on gifted children by inappropriate curriculum and class placement and shows clearly the long lasting benefits of thoughtfully planned individual educational programs. The young adults of this study speak out and show how what happened in school has influenced and still influences many aspects of their lives. Miraca Gross provides a clear, practical blueprint for teachers and parents who recognise the special learning needs of gifted children and seek to respond effectively. Published in August of 2008, WAIS-IV is the most widely used intelligence test for adults in the world. Substantive changes were made to the WAIS-IV from the WAIS-III leaving clinicians with questions as to how to use and interpret the measure effectively. Written by the creators of the new test, this book serves as the ultimate insider's guide to the new test, providing users with the kind of access to norms and data that would be unavailable to any subsequent book on clinical use of this measure. The book discusses the changes made between 3rd and 4th editions along with an FAQ and answers about use and interpretation. The reader is instructed how to interpret composite scores, and everything needed to use and interpret two entirely new composite scores: the General Ability Index (GAI), and the Cognitive Proficiency Index (CPI). This information does NOT appear in the manual accompanying the test. The second section of the book focuses on WAIS-IV use and interpretation with special clinical applications and populations, including with multicultural clients, in neuropsychological settings, with individuals experiencing psychological disorders, and with older adults. The editors and chapter authors have exclusive access to proprietary WAIS-IV data to run advanced analyses and provide information beyond what is offered in the WAIS-IV manual.
