Advances in Radiation Biology: Relative Radiation Sensitivities of Human Organ Systems, Part III, is the third volume of the series "Relative Radiation Sensitivities of Human Organ Systems." It presents reviews of organ systems not included in the preceding two parts (Advances in Radiation Biology, Volumes 12 and 14). The subject matter contained in the current volume is viewed through the eyes of the radiation therapist. Although the presentations have strong clinical overtones, an effort has been

made, wherever possible, also to address the radiobiological bases of radiation sensitivity of organs. The book contains seven chapters and begins with a study on radiation damage to the kidney. This is followed by separate chapters on inherent or intrinsic radiosensitivity of human cells; the impact of brachytherapy (i.e., short-distance radiation treatment using photon radiation) on tumors; and human tissue tolerance to fast neutron radiotherapy. Subsequent chapters deal with normal tissue effects of combined hyperthermia and radiotherapy; the impact of ionizing radiation on the successive stages of human development in utero; and developments in theoretical knowledge and practical applications of ionizing radiations which have taken place in a little less than a century. Nelson Fausto The Greek myth of Prometheus with its picture of a vulture feasting on its chained victim has traditionally provided a visual image of liver regeneration. It is a powerful and frightening representation but if one were to substitute the vulture by a surgeon and Prometheus by a patient laying on a properly prepared operating table, the outcome of the procedure would not differ significantly from that described by Greek poets. Yet few of us who work in the field have stopped long enough to ask where this myth originated. Did the poet observe a case of liver regeneration in a human being? Was it brilliant intuition or perhaps, literally, just a 'gut feeling' of a poet looking for good rhymes that led to the prediction that livers grow when part of the tissue is removed? This book does not attempt to solve these historical issues. It does, instead, cover in detail some of the major modern themes of research on liver regeneration, injury and repair. As indicated in Dr. N. Bucher's chapter, the modern phase of experimental studies on liver regeneration started in 1931 with the publication by Higgins and Anderson of a method to perform a two-thirds resection of the liver of a rat. The technique described has 3 remarkable features: 1) it is highly reproducible, resulting in the removal of 68% of the liver, 2) it has minimal if any mortality, and 3) it consists only of blood vessel ligation and does not involve cutting through or wounding hepatic tissue. Design thinking as a user-centric innovation method has become more and more widespread during the past years. An increasing number of people and institutions have experienced its innovative power. While at the same time the demand has grown for a deep, evidence-based understanding of the way design thinking functions. This challenge is addressed by the Design Thinking Research Program between Stanford University, Palo Alto, USA and Hasso Plattner Institute, Potsdam, Germany. Summarizing the outcomes of the 5th program year, this book imparts the scientific findings gained by the researchers through their investigations, experiments and studies. The method of design thinking works when applied with diligence and insight. With this book and the underlying research projects, we aim to understand the innovation process of design thinking and the people behind it. The contributions ultimately center on the issue of building innovators. The focus of the investigation is on what people are doing and thinking when engaged in creative design innovation and how their innovation work can be supported. Therefore, within three topic areas, various frameworks, methodologies, mind sets, systems and tools are explored and further developed. The book begins with an assessment of crucial factors for innovators such as empathy and creativity, the second part addresses the improvement of team collaboration and finally we turn to specific tools and approaches which ensure information transfer during the design process. All in all, the contributions shed light and show deeper insights how to support the work of design teams in order to systematically and successfully develop innovations and design progressive solutions for tomorrow.
